## 10 ASi TECHNOLOGY

SCHMERSAL offers a diverse family of AS-Interface Safety at Work (SaW) enabled safety components. Emergency-stop command devices, safety switches, solenoid interlocks or safety light curtains are simply connected to the yellow AS-Interface (ASi) cable. A safety monitor is added for the evaluation of the safety system. ASi wiring systems are one of the most flexible networks available, replacing more complex systems and drastically simplifying wiring and diagnostics, while reducing cost and installation time.

ASi Saw system features:

- Up to 31 standard and safety slaves
- No safety PLC necessary
- Maximum response time of 40ms
- Safety-relevant signals can be integrated into plant diagnostics
- Certified up to Control Category 4 according to EN954-1
- Certified up to PLe to EN ISO 13849-1
- Certified up to SIL 3 to IEC 61508

## 11 FAIL-TO-SAFE SAFETY EDGES

SCHMERSAL's rugged high-tear resistant rubber safety edges are available as sub-components or produced to user specifications. With a choice of aluminum mounting rails, they offer easy installation wherever crushing or shearing points must be safeguarded.

## 12 SAFETY PRESSURE MATS

SMS 4

SMS 5

SCHMERSAL offers a broad family of standard and custom-made industrial-grade safety pressure mats. Available in 6 standard sizes ranging from 250mm x 500mm to 1000mm x 1500mm and an infinite choice of custom shapes. SMS 4 system available with a choice of 2 different edge finishing profiles. SMS 5 system manufactured with an integrated trim, eliminating the need for a trim kit package.

## 13 OPTO-ELECTRONIC SAFETY DEVICES

SCHMERSAL offers a family of fully CE-compliant “Category 4” Safety Light Curtains. Units are available with 14mm, 30 and 50mm resolution for protection fields of 170mm to 1770mm. Each features an integral safety controller with dual 500mA PNP safety outputs and built-in blanking function as standard features. Units are UL & CSA certified, and IP67 rated. Models are available that provide IP69K protection — making them able to withstand high-temperature and high-pressure washdowns. Additional models are available with an integrated muting function, allowing process materials to pass through the curtain out of the hazardous area while still preventing workers from entering.

In addition SCHMERSAL offers their Series SLB Category 2 and Category 4 single light beams for perimeter guarding. Category 2 units feature a 4m sensing range. Category 4 units feature a 15m sensing range. Each is available with a compatible safety controller and plug-in cables for easy installation.

## 14 PROTECT – PSC

The Protect PSC is a modular, programmable safety control system designed to accept emergency-stop command devices, safety switches and opto-electronic protective devices. The modular design gives the user the ability to select individual input and output modules to configure a system to meet their individual requirements, with future expansion possible.

Unique to the PSC is the ability to build a complex safety system without programming. This is accomplished using the Mode 1 operating mode, a “hard-wired” version where the system functions result from the arrangement or order of the individual modules at the master/sub-master module. The different system modules provide the user with a fixed number of inputs and outputs. Mode 3 is the free programmable operating mode, where different inputs and outputs of the entire system can be assigned by means of an IEC 61 131-compliant programming language. The smallest system includes 8 inputs and 6 outputs, with over 250 inputs/outputs available when the system is fully extended. The Protect PSC is suitable for Control Category 4 to EN 954-1, PL<sub>e</sub> to EN13 849-1 or SIL 3 to IEC 61 508.

# 15 SAFETY CONTROLLERS **Protect** SERIES

For monitoring & control of machine guarding safety systems using:

- Safety Interlock Switches
- Safety Limit Switches
- Safety Light Curtains
- E-Stop Pushbuttons
- Cable-Pull Switches
- Two-Hand Controls

IP69K Test environment

Schmersal offers a range of products that meet IP69K sealing requirements ... tolerating high temperature (up to 80°C) steam or water washdowns at pressures up to 1500 psi. They are easy to clean, specifically designed to prevent the accumulation of process substances, dirt and/or bacteria.

The IP69K rating is ideal for applications where hygienic conditions are critical (food processing, medical equipment, meat packaging and pharmaceutical manufacturing). Also for harsh outdoor environments, including construction equipment, all-terrain vehicles, portable equipment, marine and automotive applications.

The range of IP69K-rated products include N series control devices and indicator lights, K series joysticks, Type 2 or 4 safety light curtains, and non-contact sensors which use coded magnets, RFID, or Pulse Echo technologies.
