1 Product Description

Class 2 visible laser displacement sensor with both analog and discrete (switched) outputs

- Easy to set up and use with a 2-line, 8-character display
- Repeatability and accuracy for challenging targets, from metal to black rubber
- Visible Class 2 laser for easy alignment
- Sensing range from 100.0 mm (3.94") to 400.0 mm (15.75")

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

1.1 Models

| Model | Cable | Output 1 | Output 2 | Range |
|----------|---|---------------------------------------|--|---------------------|
| LE250I | 2 m cable | Analog Current Output (4 to 20 mA) | Discrete, programmable as PNP (Sourcing) or NPN (Sinking) | 100 mm to 400 mm |
| LE250IQ | Rotatable M12 Euro QD connector, 5-pin | | | |
| LE250IQP | 152 mm (6 in) PVC pigtail, M12 Euro QD connector, 5-pin | | | |
| LE250U | 2 m cable | Analog Voltage Output (0 to 10 V) | | |
| LE250UQ | Rotatable M12 Euro QD connector, 5-pin | | | |
| LE250UQP | 152 mm (6 in) PVC pigtail, M12 Euro QD connector, 5-pin | | | |

A model with a QD connector requires a mating cordset (see [Cordsets](#) on page 44) . To order 9.1 m (30 ft) cables: add suffix W/30 to the model number (for example, LE250IW/30).

1.1 Other Available LE Laser Models

| Model | Cable | Output 1 | Output 2 | Range |
|----------|---|---------------------------------------|--|----------------------|
| LE550I | 2 m cable | Analog Current Output (4 to 20 mA) | Discrete, programmable as PNP (Sourcing) or NPN (Sinking) | 100 mm to 1000 mm |
| LE550IQ | Rotatable M12 Euro QD connector, 5-pin | | | |
| LE550IQP | 152 mm (6 in) PVC pigtail, M12 Euro QD connector, 5-pin | | | |
| LE550U | 2 m cable | Analog Voltage Output (0 to 10 V) | | |
| LE550UQ | Rotatable M12 Euro QD connector, 5-pin | | | |
| LE550UQP | 152 mm (6 in) PVC pigtail, M12 Euro QD connector, 5-pin | | | |

Refer to the LE550 Instruction Manual (Banner p/n [175094](#)) for more details about available models.

1.2 Overview

The L-GAGE LE250 Laser Gauging Sensor is a Class 2 visible, bore-sighted laser displacement sensor designed for precise, color-insensitive measurements. The working range of the sensor is from 100.0 mm (3.94") to 400.0 mm (15.75"). A 2-line LCD shows the real-time distance measurement, in either millimeters or inches, and the analog output measurement, in milliamps or volts, when the sensor is in Run mode.

See [Factory Default Settings](#) on page 34 for a list of sensor default settings.

Models with Current or Voltage Analog Outputs are available. This manual provides the display information and the navigation paths for the Current models with the Voltage model text in parentheses if it is different than the Current model.

1.2.1 Features and Indicators

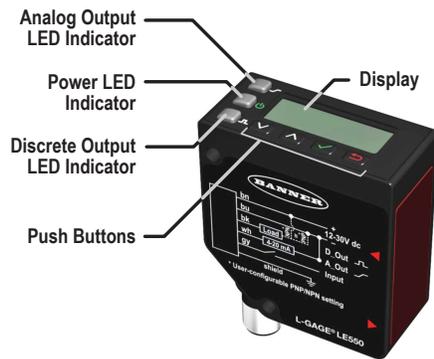

Figure 1. LE Sensor Features

Three LED indicators provide ongoing indication of the sensing status.

Analog Output LED Indicator

- Solid Amber = Displayed distance is within the taught analog output window
- Off = Displayed distance is outside the taught analog output window

Power LED Indicator

- Solid Green = Normal operation, power On and laser On
- Flashing Green (1 Hz) = Power On and laser Off (laser enable mode)

Discrete Output LED Indicator

- Solid Amber = Discrete Output is On
- Off = Discrete Output is Off

1.2.2 Display

Figure 2. Display in Run Mode

The display is a 2-line, 8-character LCD. The main screen is the Run mode screen, which shows the real-time distance measurement and the analog output measurement.

1.2.3 Buttons

Use the sensor buttons Down, Up, Enter, and Escape to program the sensor and to access sensor information.

Down and Up Buttons

Press Down and Up to:

- Access the Quick Menu from Run mode
- Navigate the menu systems
- Change programming settings

When navigating the menu systems, the menu items loop.

Press Down and Up to change setting values. Press and hold the buttons to cycle through numeric values. After changing a setting value, it slowly flashes until the change is saved using the Enter button.

Enter Button

Press Enter to:

- Access the Sensor Menu from Run mode
- Access the submenus
- Save changes

In the Sensor Menu, a check mark ✓ in the lower right corner of the display indicates that pressing Enter accesses a submenu.

Press Enter to save changes. New values flash rapidly and the sensor returns to the parent menu.

Escape Button

Press Escape to:

- Leave the current menu and return to the parent menu
- Return to Run mode from the Quick Menu

Important: Pressing Escape discards any unsaved programming changes.

In the Sensor Menu, a return arrow ↩ in the upper left corner of the display indicates that pressing Escape returns to the parent menu.

Press and hold Escape for 2 seconds to return to Run mode from any menu or remote teach.

1.3 Laser Description and Safety Information

For Safe Laser Use - Class 2 Lasers

- Do not stare at the laser.
- Do not point the laser at a person's eye.
- Mount open laser beam paths either above or below eye level, where practical.
- Terminate the beam emitted by the laser product at the end of its useful path.

Reference IEC 60825-1:2001, Section 8.2.

CAUTION: Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure. Do not attempt to disassemble this sensor for repair. A defective unit must be returned to the manufacturer.

CAUTION: Never stare directly into the sensor lens. Laser light can damage your eyes. Avoid placing any mirror-like object in the beam. Never use a mirror as a retroreflective target.

Class 2 Lasers

Class 2 lasers are lasers that emit visible radiation in the wavelength range from 400 nm to 700 nm, where eye protection is normally afforded by aversion responses, including the blink reflex. This reaction may be expected to provide adequate protection under reasonably foreseeable conditions of operation, including the use of optical instruments for intrabeam viewing.

Figure 3. FDA (CDRH) warning label (Class II)

Class 2 Laser Safety Notes

Low-power lasers are, by definition, incapable of causing eye injury within the duration of a blink (aversion response) of 0.25 seconds. They also must emit only visible wavelengths (400 to 700 nm). Therefore, an ocular hazard may exist only if individuals overcome their natural aversion to bright light and stare directly into the laser beam.

2 Sensor Installation

NOTE: Handle the sensor with care during installation and operation. Sensor windows soiled by fingerprints, dust, water, oil, etc. may create stray light that may degrade the peak performance of the sensor. Blow the window clear using filtered, compressed air, then clean as necessary using 70% isopropyl alcohol and cotton swabs or water and a soft cloth.

2.1 Sensor Orientation

Correct sensor-to-object orientation is important to ensure proper sensing. See the following figures for examples of correct and incorrect sensor-to-object orientation as certain placements may pose problems for sensing distances.

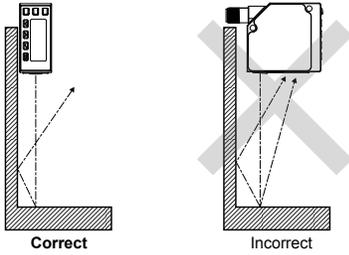

Figure 4. Orientation by a wall

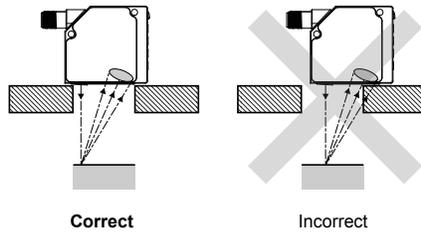

Figure 5. Orientation in an opening

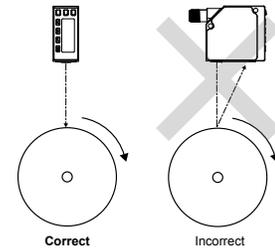

Figure 6. Orientation for a turning object

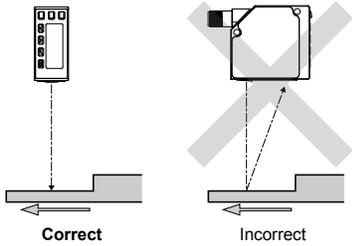

Figure 7. Orientation for a height difference

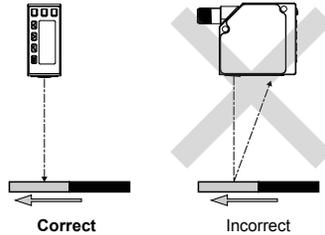

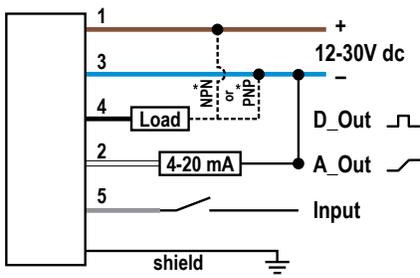

Figure 8. Orientation for a color or luster difference

2.2 Sensor Mounting

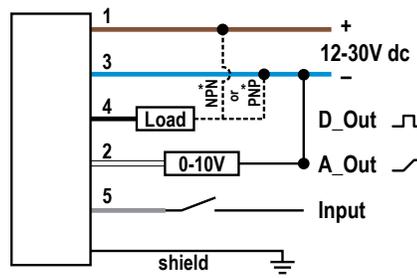

1. If a bracket is needed, mount the sensor onto the bracket.
2. Mount the sensor (or the sensor and the bracket) to the machine or equipment at the desired location. Do not tighten at this time.
3. Check the sensor alignment.
4. Tighten the screws to secure the sensor (or the sensor and the bracket) in the aligned position.

2.3 Wiring Diagrams

* User-configurable PNP/NPN setting

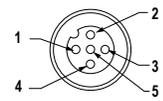

Figure 9. Analog Current Model

* User-configurable PNP/NPN setting

Figure 10. Analog Voltage Model

Key

- 1 = Brown
- 2 = White
- 3 = Blue
- 4 = Black
- 5 = Gray

3 Sensor Programming

Program the sensor using the buttons on the sensor or the remote input (limited programming options).

From Run mode, use the buttons to access the Quick Menu and the Sensor Menu. See [Quick Menu](#) on page 9 and [Sensor Menu \(MENU\)](#) on page 10 for more information on the options available from each menu. For TEACH options, follow the TEACH instructions.

In addition to programming the sensor, use the remote input to disable the buttons for security, preventing unauthorized or accidental programming changes. See [Remote Input](#) on page 10 for more information.

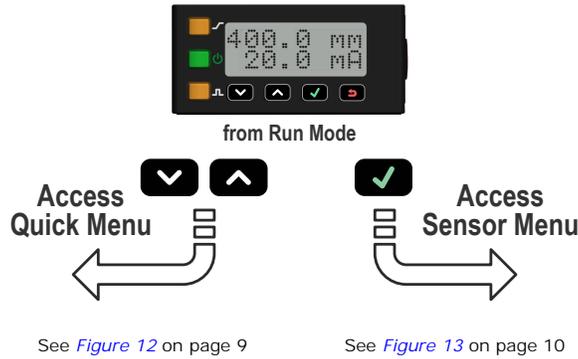

Figure 11. Accessing the Menus

3.1 Quick Menu

The sensor includes a Quick Menu with easy access to view and change the analog and discrete output setpoints. Access the Quick Menu by pressing Down or Up from Run mode. When in the Quick Menu, the current distance measurement displays on the first line and the menu name and the analog value alternate on the second line of the display. Press Enter to access the setpoints. Press Down or Up to change the setpoint to the desired value. Press Enter to save the new value and return to the Quick Menu.

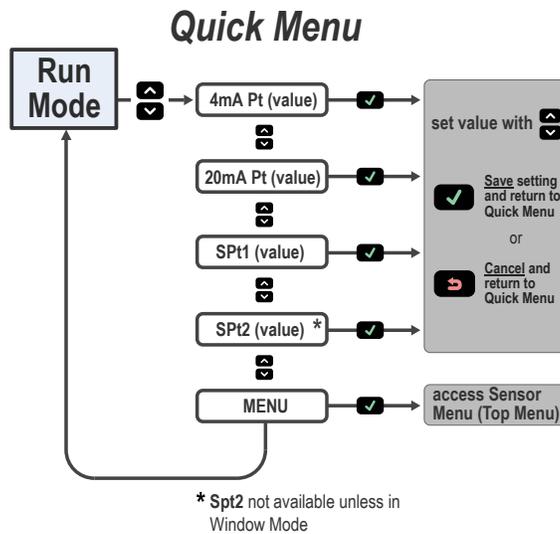

Figure 12. Quick Menu Map (Window Mode)

3.2 Sensor Menu (MENU)

Access the Sensor Menu by pressing Enter  from Run mode. The Sensor Menu is also accessible from the Quick Menu: navigate to MENU and press Enter . The Sensor Menu includes several submenus that provide access to view and change sensor settings and to view sensor information.

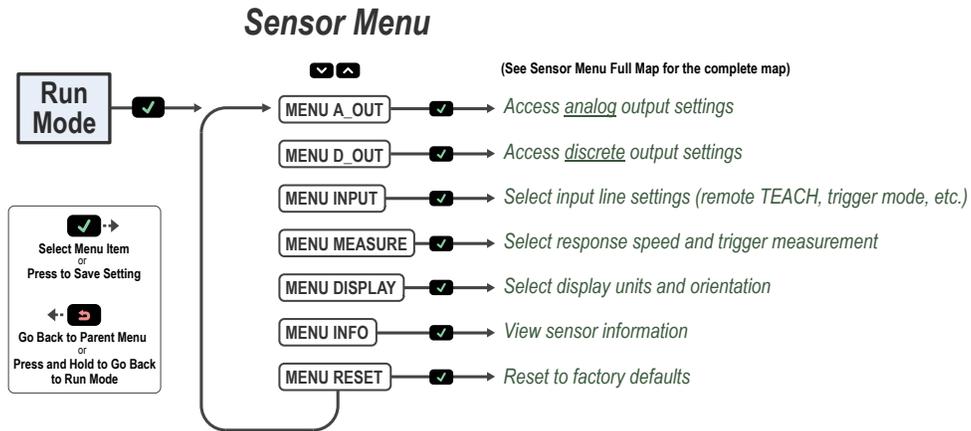

Figure 13. Sensor Menu Basic Map

See *Sensor Menu Full Map* and the Menu sections of this manual for more information.

3.3 Remote Input

Use the remote input to program the sensor remotely. The remote input provides limited programming options and is Active Low by default. For Active Low, connect the gray input wire to ground (0 V dc), with a remote switch connected between the wire and ground. To use the Active High function, configure the sensor for Active High using the buttons on the sensor, then connect the gray input wire to V+ (12 to 30 V dc). Pulse the remote input according to the diagram and the instructions provided in this manual.

The length of the individual programming pulses is equal to the value T: 0.04 seconds ≤ T ≤ 0.8 seconds.

Exit remote programming modes by holding the remote input low for > 2 seconds, or waiting for the automatic 60-second timeout, or by pressing and holding Escape  for 2 seconds. The sensor returns to Run mode without saving any new settings.

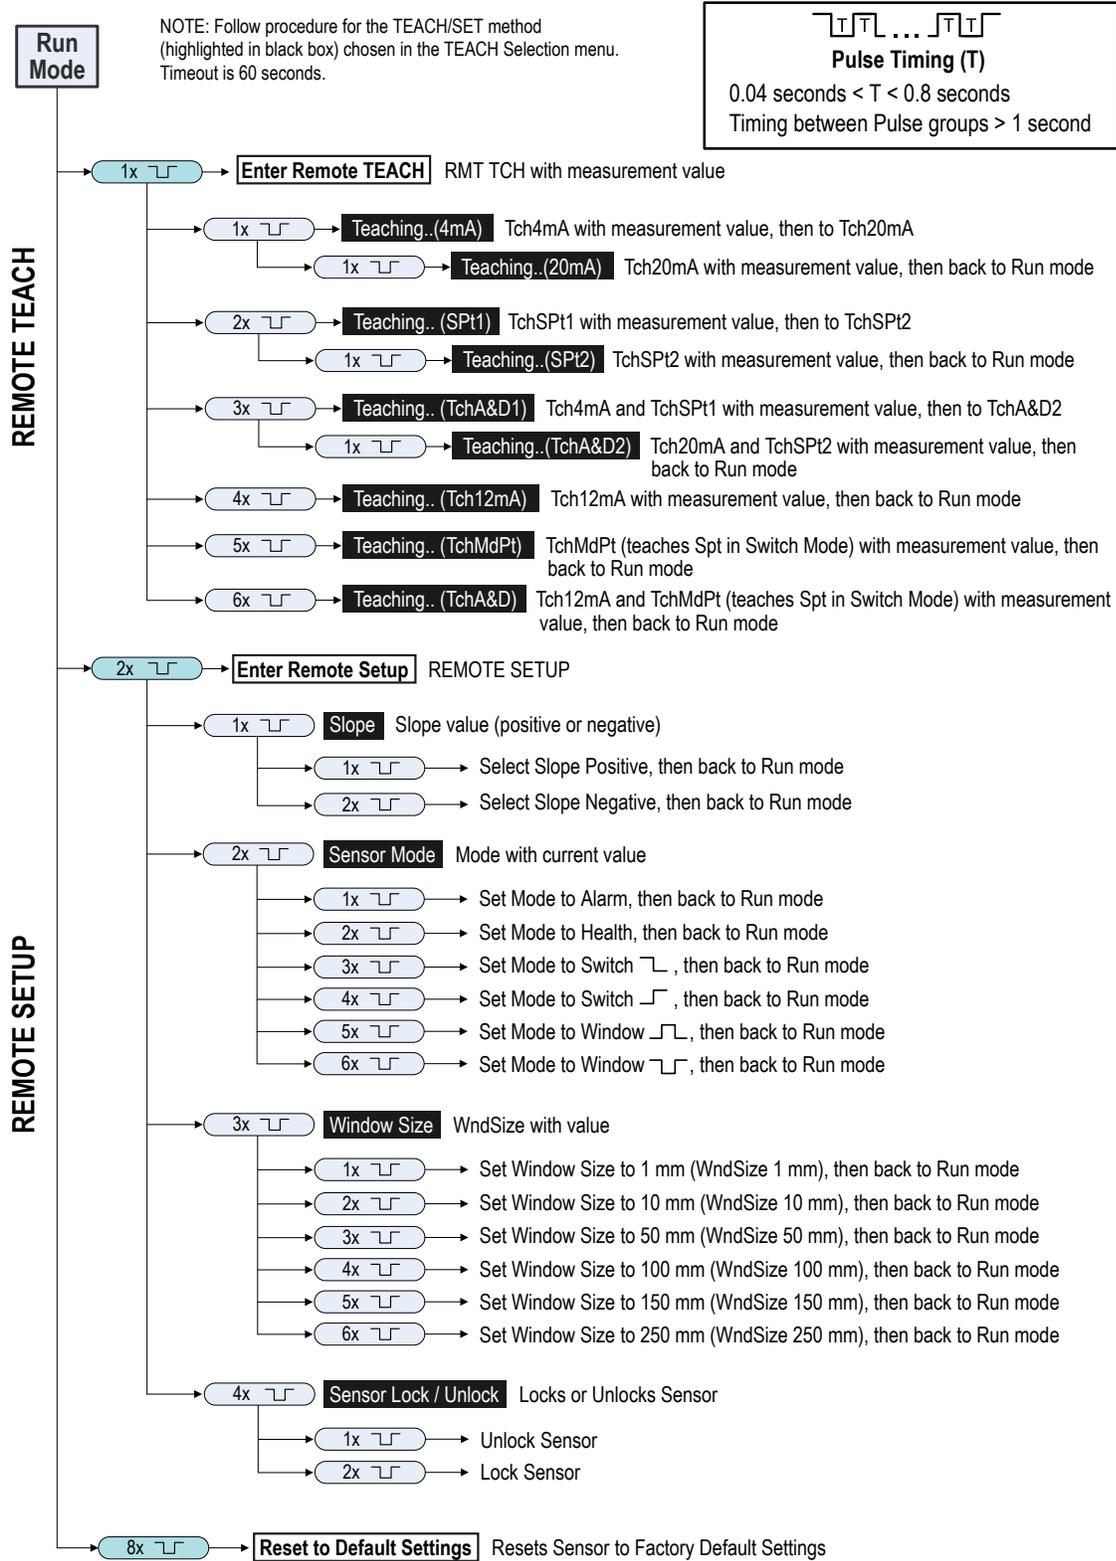

Figure 14. Remote Input Map

Refer to [Factory Default Settings](#) on page 34 for the default settings.

3.4 Locking and Unlocking the Sensor

Use the lock and unlock feature to prevent unauthorized or accidental programming changes. A lock symbol  displays in the upper left corner of the display to indicate when the sensor is locked. When locked, the menus are available to view settings, but the values cannot be changed. The remote input is also disabled, except for the unlock function.

Button Instructions

To lock or unlock the sensor using the buttons, press and hold Down  and Escape  simultaneously for 3 seconds.

Remote Input Instructions

1. Access the setup mode.

| Action | Result |
|--------------------------------|--|
| Double-pulse the remote input. |  "REMOTE SETUP" displays. |

2. Access the lock/unlock function.

| Action | Result |
|------------------------------|--|
| Four-pulse the remote input. |  "LOCK" and the current status (unlocked or locked) display. |

3. Lock or unlock the sensor.

| Action | Result |
|--|--|
| Unlock : Single-pulse the remote line. |  "Unlocked" flashes and the sensor returns to Run mode. The sensor is unlocked. |
| Lock: Double-pulse the remote input. |  "Locked" flashes and the sensor returns to Run mode. The sensor is locked and the lock symbol displays in the upper left corner. |

3.5 Analog Output Menu (A_OUT)

Use the Analog Output menu to view or change:

- 4 mA (0 V) setpoint
- 20 mA (10 V) setpoint
- 12 mA (5 V) window
- Slope
- Loss of signal behavior

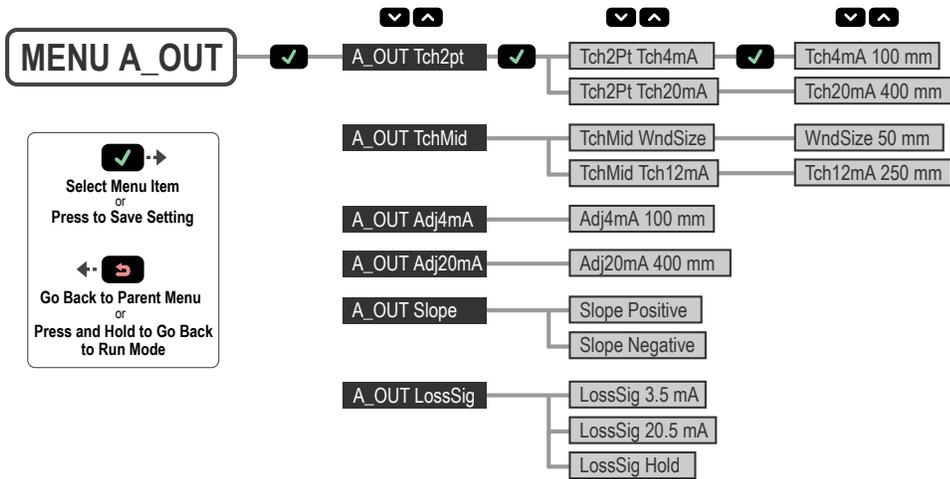

Figure 15. Analog Output Menu Map

3.5.1 TEACH 4 mA (0 V) and TEACH 20 mA (10 V)

The Tch4mA (Tch0V) and Tch20mA (Tch10V) options use targets to set the 4 mA (0 V) and 20 mA (10 V) to the desired setpoints. When using the buttons, only one value needs to be set if the second value is valid. When using the remote input, both values must be set.

Navigate: MENU > A_OUT > Tch2Pt > Tch4mA (Tch0V) or navigate: MENU > A_OUT > Tch2Pt > Tch20mA (Tch10V)

Remote input: Available

Button Instructions

1. Present the target.

| Action | Result |
|--|---|
| Present the target. The target must be between 100.0 mm (3.94") and 400.0 mm (15.75"). | The target's analog output measurement and distance measurement values display. |

2. Access the TEACH mode and TEACH the sensor.

| Action | Result |
|--|--|
| Navigate: MENU > A_OUT > Tch2Pt > Tch4mA (Tch0V) OR Navigate: MENU > A_OUT > Tch2Pt > Tch20mA (Tch10V) | The selected TEACH mode and "Teaching" display while the sensor is being taught. <u>TEACH Accepted</u> The new value is shown on the second line of the display and flashes before it is saved and the sensor returns to the parent menu. <u>TEACH Not Accepted</u> "FAIL" and a warning message display, and the sensor returns to the parent menu. |

3. Repeat steps 1 to 2 for the other setpoint, if desired.

Remote Input Instructions

Teaches both the 4 mA (0 V) and 20 mA (10 V) setpoints.

1. Access the TEACH mode.

| Action | Result |
|--|--|
| Single-pulse the remote input.  | "RMT TCH" and the current measurement value display. |

2. Present the target.

| Action | Result |
|--------------------------------|---|
| Present the 4 mA (0 V) target. | "RMT TCH" and the target's measurement value display. |

3. TEACH the sensor.

| Action | Result |
|--|---|
| Single-pulse the remote input.  | <p>"Tch4mA (Tch0V) Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and then "Tch20mA (Tch10V)" and the current measurement value display.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

4. Present the target.

| Action | Result |
|----------------------------------|--|
| Present the 20 mA (10 V) target. | "Tch20mA (Tch10V)" and the target's measurement value display. |

5. TEACH the sensor.

| Action | Result |
|--|--|
| Single-pulse the remote input.  | <p>"Tch20mA (Tch10V) Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

3.5.2 Midpoint TEACH

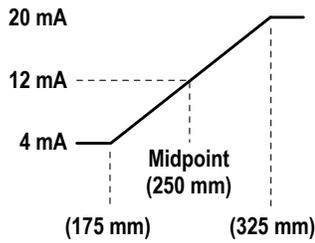

Figure 16. Window and Midpoint Example

The Midpoint TEACH uses both the window size and the 12 mA (5 V) setpoint to determine the actual measurement window. For example, a window of 150 mm with a 12 mA (5 V) setpoint of 250 mm places the measurement window from 175 mm to 325 mm.

To use the Midpoint TEACH:

1. Set the window size using [Window Size](#) on page 15.
2. Set the measurement window using [TEACH 12 mA \(5 V\)](#) on page 16.

The Analog Output Midpoint TEACH and the Discrete Output Midpoint TEACH are independent settings (see [Midpoint TEACH](#) on page 22).

Window Size

The WndSize option sets the window size that the Midpoint TEACH uses to set the 4 mA (0 V) and 20 mA (10 V) setpoints. The window size can be set from 1.0 mm (0.039") to 250.0 mm (9.84").

The Midpoint TEACH will fail if one of the setpoints is beyond the measurement range (100.0 mm (3.94") to 400.0 mm (15.75")). The bigger the window size, the smaller the acceptable TEACH range.

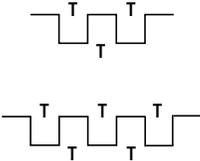

The Analog Output window size is a different setting than the Discrete Output window size when defined using the button.

Navigate: MENU > A_OUT > TchMid > WndSize

Remote Input: Available

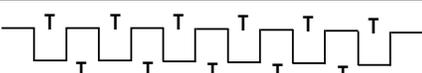

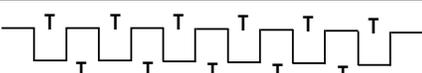

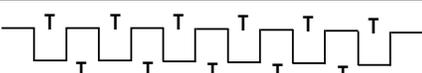

Default: 50.0 mm (1.97")

1. Access the Window Size mode.

| Method | Action | Result |
|--------------|---|--|
| Push Button | Navigate: MENU > A_OUT > TchMid > WndSize | "WndSize" and the current window size value display. |
| Remote Input | a. Double-pulse the remote input to enter setup mode. b. Three-pulse the remote input to enter window size mode. |  a. "REMOTE SETUP" displays. b. "WndSize" and the current window size value display. |

2. Set the window size.

| Method | Action | Result |
|-------------|--|---|
| Push Button | a. Use Down  and Up  and to set the desired window size—the value changes in increments of 2. b. Press Enter  to save the new value. | a. "WndSize" and the new value display. b. The new value flashes and the sensor returns to "TchMid WndSize". |

| Method | Action | Result | | | | | | | | | | | | | | |
|---|--|---|-----------------|-------------|---|-----------------|---|---------|---|---------|---|----------|---|----------|---|------------------|
| Remote Input (Sets A_OUT and D_OUT window Size) | Pulse the remote input 1 to 6 times to select the desired window size. | The new value flashes and the sensor returns to Run mode. | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Pulses</th> <th>Window Size</th> </tr> </thead> <tbody> <tr> <td>1 </td> <td>1.0 mm (0.039")</td> </tr> <tr> <td>2 </td> <td>10.0 mm</td> </tr> <tr> <td>3 </td> <td>50.0 mm</td> </tr> <tr> <td>4 </td> <td>100.0 mm</td> </tr> <tr> <td>5 </td> <td>150.0 mm</td> </tr> <tr> <td>6 </td> <td>250.0 mm (9.84")</td> </tr> </tbody> </table> | | Pulses | Window Size | 1  | 1.0 mm (0.039") | 2  | 10.0 mm | 3  | 50.0 mm | 4  | 100.0 mm | 5  | 150.0 mm | 6  | 250.0 mm (9.84") |
| | Pulses | | Window Size | | | | | | | | | | | | | |
| | 1  | | 1.0 mm (0.039") | | | | | | | | | | | | | |
| | 2  | | 10.0 mm | | | | | | | | | | | | | |
| | 3  | | 50.0 mm | | | | | | | | | | | | | |
| | 4  | | 100.0 mm | | | | | | | | | | | | | |
| 5  | 150.0 mm | | | | | | | | | | | | | | | |
| 6  | 250.0 mm (9.84") | | | | | | | | | | | | | | | |

TEACH 12 mA (5 V)

The Tch12mA (Tch5V) option sets the midpoint that determines the actual measurement window.

Navigate: MENU > A_OUT > TchMid > Tch12mA (Tch5V)

Remote Input: Available

Button Instructions

1. Present the target.

| Action | Result |
|---------------------|---|
| Present the target. | The target's analog output measurement and distance measurement values display. |

2. Access the TEACH 12 mA (5 V) mode and TEACH the sensor.

| Action | Result |
|---|--|
| Navigate: MENU > A_OUT > TchMid > Tch12mA (Tch5V) . | <p>"Tch12mA (Tch5V) Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value is shown on the second line of the display and flashes before it is saved and the sensor returns to "TchMid Tch12mA (Tch5V)".</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" and a warning message display and the sensor returns to "Tch Mid Tch12mA (Tch5V)".</p> |

Remote Input Instructions

1. Access the TEACH mode.

| Action | | Result |
|--------------------------------|---|--|
| Single-pulse the remote input. |  | "RMT TCH" and the current measurement value display. |

2. Present the target.

| Action | | Result |
|---------------------|--|---|
| Present the target. | | "RMT TCH" and the target's measurement value display. |

3. TEACH the sensor.

| Action | | Result |
|------------------------------|--|---|
| Four-pulse the remote input. |  | <p>"Tch12mA (Tch5V) Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns step 2, and "RMT TCH" displays.</p> |

3.5.3 Adjust 4 mA (0 V)

The Adj4mA (Adj0V) option manually adjusts the distance at which the Analog Output is 4 mA (0 V). The value is adjustable between 100.0 mm (3.94") and 400.0 mm (15.75"). It is required to be at least 1.0 mm (0.039") from the 20 mA (10 V) distance. For Voltage models, this is the 0 V setpoint.

Navigate: MENU > A_OUT > Adj4mA (Adj0V)

Remote Input: Not available

Default: 100.0 mm (3.94")

3.5.4 Adjust 20 mA (10 V)

The Adj20mA (Adj10V) option manually adjusts the distance at which the Analog Output is 20 mA (10 V). The value is adjustable between 100.0 mm (3.94") and 400.0 mm (15.75"). It is required to be at least 1.0 mm (0.039") from the 4 mA (0 V) distance. For Voltage models, this is the 10 V setpoint.

Navigate: MENU > A_OUT > Adj20mA (Adj10V)

Remote Input: Not available

Default: 400.0 mm (15.75")

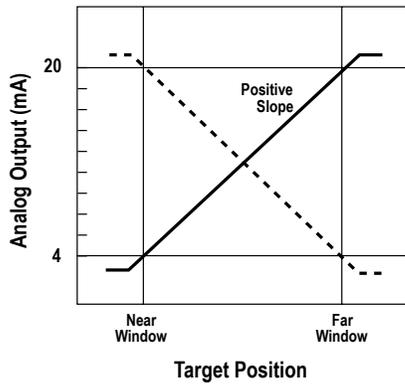

3.5.5 Slope

The Slope option sets the slope as positive or negative. This swaps the 4 mA and 20 mA (0 V and 10 V) values.

Navigate: MENU > A_OUT > Slope

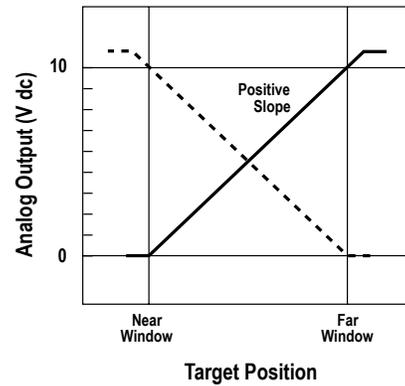

Remote Input: Available

Default: Positive

The analog current output tracks slightly beyond each window limit (from 3.8 mA to 20.2 mA)

Figure 17. Slope—Current-Sourcing Models

The analog voltage output tracks slightly beyond the upper window limit (up to 10.2 V)

Figure 18. Slope—Voltage-Sourcing Models

1. Access the slope setting.

| Method | Action | Result |
|--------------|---|---|
| Push Button | Navigate: MENU > A_OUT > Slope | "Slope" and the current setting display. |
| Remote Input | a. Double-pulse the remote input to enter setup mode. | a. "REMOTE SETUP" displays. |
| | b. Single-pulse the remote input to access A_OUT Slope. | b. "Slope" and the current setting display. |

2. Set the slope.

| Method | Action | Result |
|--------------|--|--|
| Push Button | a. Use Down  and Up  to change the slope between Positive and Negative. b. Press Enter  to save the selection. | a. The selection flashes rapidly on the display. b. The selection is saved and the sensor returns to "A_OUT Slope". |
| Remote Input | Positive slope: Single-pulse the remote input Negative slope: Double-pulse the remote input | The selection flashes rapidly on the display, and the sensor returns to Run mode. |

3.5.6 Loss of Signal

The LossSig option sets the Analog Output value used by the sensor during a loss of signal. When a signal is restored, measurement resumes.

Navigate: Menu > A_Out > LossSig

Remote Input: Not available

Default: 3.5 mA (0 V)

| Option | Description |
|------------------|---|
| 3.5 mA (0 V) | The Analog Output switches to this value 2 seconds after a loss of signal. When advanced measurements are enabled, the Analog Output is updated to this value immediately upon the release of the trigger input. For Voltage models, this is 0 V. (Default) |
| 20.5 mA (10.5 V) | The Analog Output switches to this value 2 seconds after a loss of signal. When advanced measurements are enabled, the Analog Output is updated to this value immediately upon the release of the trigger input. For Voltage models, this is 10.5 V. |
| Hold | The Analog Output holds the last value indefinitely during a loss of signal. When advanced measurements are enabled, the last value is held across the triggered measurement periods. |

The Range advanced measurement behavior is affected by the Loss of Signal option. For additional information on advanced measurements, see [Trigger](#) on page 30. The Range advanced measurement tracks a maximum and a minimum during the measurement period, and calculates the range as follows:

$$\text{Range} = \text{maximum distance} - \text{minimum distance}$$

If the maximum and/or minimum measurements are outside of the taught setpoints, the Loss of Signal option determines how the range is calculated.

| Option | Sensor Behavior in Range Mode |
|------------------|--|
| 3.5 mA (0 V) | If the maximum or minimum measurement is outside of the taught setpoints, the sensor outputs 3.5 mA (0 V) to indicate an out of range measurement. |
| 20.5 mA (10.5 V) | If the maximum or minimum measurement is outside of the taught setpoints, the sensor outputs 20.5 mA (10.5 V) to indicate an out of range measurement. |
| Hold | The sensor limits the maximum and minimum measurements so that they cannot exceed the taught setpoints. |

3.6 Discrete Output Menu (D_OUT)

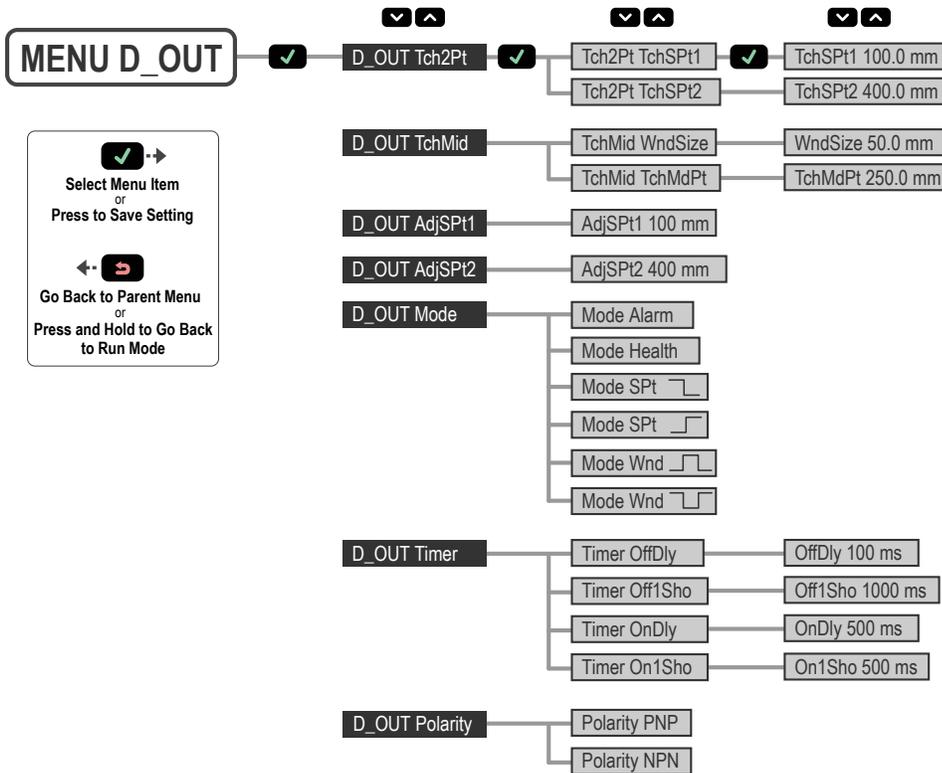

Figure 19. Discrete Output Menu Map

3.6.1 Two-Point TEACH

The TchSPt1 and TchSPt2 options teach the desired setpoints. When using the buttons, the setpoints can be taught independently. Both values must be taught when using the remote input.

NOTE: When in Switch mode, use [TEACH Switchpoint](#) on page 25.

Navigate: MENU > D_OUT > Tch2Pt > TchSPt1 and navigate: MENU > D_OUT > Tch2Pt > TchSPt2

Remote Input: Available

Button Instructions

1. Present the target.

| Action | Result |
|--|--|
| Present the target. The target must be between 100.0 mm (3.94") and 400.0 mm (15.75"). | The target's analog output measurement and distance measurement value display. |

2. Access the TEACH mode and TEACH the sensor.

| Action | Result |
|--|--|
| Navigate: MENU > D_OUT > Tch2Pt > TchSPt1 OR Navigate: MENU > D_OUT > Tch2Pt > TchSPt2 | The selected TEACH mode and "Teaching" display while the sensor is being taught. <u>TEACH Accepted</u> The new value is shown on the second line of the display and flashes before it is saved and the sensor returns to the parent menu. <u>TEACH Not Accepted</u> "FAIL" and a warning message display, and the sensor returns to the parent menu. |

- Repeat steps 1 to 2 for the other setpoint, if desired.

Remote Input Instructions

- Access the TEACH mode.

| Action | Result |
|--|--|
| Single-pulse the remote input.  | "RMT TCH" and the current setpoint value displays. |

- Present the target.

| Action | Result |
|----------------------------------|---|
| Present the setpoint one target. | "RMT TCH" and the target's measurement value display. |

- TEACH the sensor.

| Action | Result |
|--|--|
| Double-pulse the remote input.  | "TchSPt1 Teaching" displays while the sensor is being taught. <u>TEACH Accepted</u> The new value displays on the second line of the display, flashes, and the sensor goes to "TchSPt2" and the current measurement value. <u>TEACH Not Accepted</u> "FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays. |

- Present the target.

| Action | Result |
|----------------------------------|---|
| Present the setpoint two target. | "TchSPt2" and the target's measurement value display. |

- TEACH the sensor.

| Action | Result |
|--------------------------------|---|
| Single-pulse the remote input. | <p>"TchSPt2 Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

3.6.2 Midpoint TEACH

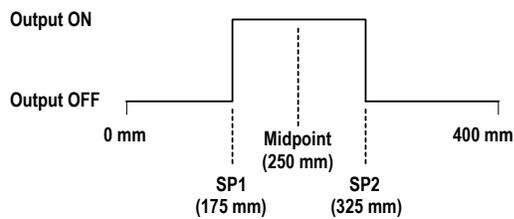

Figure 20. Window and Midpoint Example

The Midpoint TEACH uses both the window size and the TEACH midpoint to determine the actual measurement window. For example, a window of 150 mm with a midpoint of 250 mm places the measurement window from 175 mm to 325 mm.

To use Midpoint TEACH:

1. Set the window size using [Window Size](#) on page 22.
2. Set the measurement window using [TEACH Midpoint](#) on page 23.

The Discrete Output Midpoint TEACH and the Analog Output Midpoint TEACH are independent settings (see [Midpoint TEACH](#) on page 15).

Window Size

The WndSize option sets the window size that the Midpoint TEACH uses to set the setpoint one and setpoint two thresholds. The window size can be set from 1.0 mm (0.039") to 250.0 mm (9.84").

The Midpoint TEACH will fail if one of the setpoints is beyond the measurement range (100.0 mm (3.94") to 400.0 mm (15.75")). The bigger the window size, the smaller the acceptable TEACH range.

The Discrete Output window size is a different setting than the Analog Output window size when defined using the button.

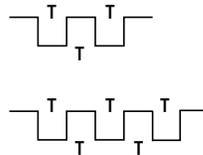

Navigate: MENU > D_OUT > TchMid > WndSize

Remote Input: Available

Default: 50.0 mm (1.97")

1. Access the setup mode.

| Method | Action | Result |
|--------------|--|---|
| Push Button | Navigate: MENU > D_OUT > TchMid > WndSize . | "WndSize" and the current window size value display. |
| Remote Input | <p>a. Double-pulse the remote input to enter setup mode.</p> <p>b. Three-pulse the remote input to enter window size mode.</p> | <p>a. "REMOTE SETUP" displays.</p> <p>b. "WndSize" and the current value display.</p> |

2. Set the window size.

| Method | Action | Result | | | | | | | | | | | | | | |
|---|---|---|-------------|---|--------------------|---|---------|---|---------|---|----------|---|----------|---|---------------------|--|
| Push Button | <p>a. Use Down  and Up  to set the desired window size—the value changes in increments of 2.</p> <p>b. Press Enter  to save the new value.</p> | <p>a. "WndSize" and the new value display.</p> <p>b. The new value flashes and returns to "TchMid WndSize".</p> | | | | | | | | | | | | | | |
| Remote Input (Sets A_OUT and D_OUT window Size) | <p>Pulse the remote input 1 to 6 times to select the desired window size.</p> <table border="1" data-bbox="407 411 1081 997"> <thead> <tr> <th>Pulses</th> <th>Window Size</th> </tr> </thead> <tbody> <tr> <td>1 </td> <td>1.0 mm (0.039")</td> </tr> <tr> <td>2 </td> <td>10.0 mm</td> </tr> <tr> <td>3 </td> <td>50.0 mm</td> </tr> <tr> <td>4 </td> <td>100.0 mm</td> </tr> <tr> <td>5 </td> <td>150.0 mm</td> </tr> <tr> <td>6 </td> <td>250.0 mm (9.84")</td> </tr> </tbody> </table> | Pulses | Window Size | 1  | 1.0 mm (0.039") | 2  | 10.0 mm | 3  | 50.0 mm | 4  | 100.0 mm | 5  | 150.0 mm | 6  | 250.0 mm (9.84") | <p>The new value flashes and the sensor returns to Run mode.</p> |
| Pulses | Window Size | | | | | | | | | | | | | | | |
| 1  | 1.0 mm (0.039") | | | | | | | | | | | | | | | |
| 2  | 10.0 mm | | | | | | | | | | | | | | | |
| 3  | 50.0 mm | | | | | | | | | | | | | | | |
| 4  | 100.0 mm | | | | | | | | | | | | | | | |
| 5  | 150.0 mm | | | | | | | | | | | | | | | |
| 6  | 250.0 mm (9.84") | | | | | | | | | | | | | | | |

TEACH Midpoint

The TchMdPt option sets the midpoint that determines the actual measurement window.

Navigate: MENU > D_OUT > TchMid > TchMdPt

Remote Input: Available

Button Instructions

1. Present the target.

| Action | Result |
|---------------------|--|
| Present the target. | The target's analog output measurement and distance measurement value display. |

2. Access the TEACH midpoint mode and TEACH the sensor.

| Action | Result |
|---|--|
| Navigate: MENU > D_OUT > TchMid > TchMdPt | <p>"TchMdPt Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value is shown on the second line of the display and flashes before it is saved and the sensor returns to "TchMid TchMdPt".</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" and a warning message display, and the sensor returns to "TchMid TchMdPt".</p> |

Remote Input Instructions

1. Access the TEACH mode.

| Action | Result |
|--|--|
| Single-pulse the remote input.  | "RMT TCH" and the current measurement value display. |

2. Present the target.

| Action | Result |
|---------------------|---|
| Present the target. | "RMT TCH" and the target's measurement value display. |

3. TEACH the sensor.

| Action | Result |
|---|---|
| Five-pulse the remote input.  | <p>"TchMdpt Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" and a warning message display, the sensor returns to step 2, and "RMT TCH" displays.</p> |

3.6.3 Adjust Setpoint One

The AdjSPt1 option manually adjusts the value of the setpoint one threshold for the Discrete Output when the sensor is in Window mode. The value is adjustable between 100.0 mm (3.94") and 400.0 mm (15.75"). It is required to be at least 1.0 mm (0.039") from setpoint two. This menu is not available when the sensor is in Switch, Alarm, or Health mode.

Navigate: MENU > D_OUT > AdjSPt1

Remote Input: Not available

Default: 100.0 mm (3.94")

3.6.4 Adjust Setpoint Two

The AdjSPt2 option manually adjusts the value of the setpoint two threshold for the Discrete Output when the sensor is in Window mode. The value is adjustable between 100.0 mm (3.94") and 400.0 mm (15.75"). It is required to be at least 1.0 mm (0.039") from setpoint one. This menu is not available when the sensor is in Switch, Alarm, or Health mode.

Navigate: MENU > D_OUT > AdjSPt2

Remote Input: Not available

Default: 400.0 mm (15.75")

3.6.5 TEACH Switchpoint

The TchSPt option teaches the distance at which the setpoint threshold is placed when the Discrete Output is in Switch mode. This menu is not available when the sensor is in Window, Alarm, or Health mode.

Navigate: MENU > D_OUT > TchSPt

Remote Input: Available

Button Instructions

1. Present the target.

| Action | Result |
|--|--|
| Present the target. The target must be between 100.0 mm (3.94") and 400.0 mm (15.75"). | The target's analog output measurement and distance measurement value display. |

2. Access the setpoint TEACH mode and TEACH the sensor.

| Action | Result |
|---------------------------------|--|
| Navigate: MENU > D_OUT > TchSPt | <p>"TchSPt Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value is shown on the second line of the display and flashes before it is saved and the sensor returns to "D_OUT TchSPt".</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" and a warning message display, and the sensor returns to D_OUT TchSPt".</p> |

Remote Input Instructions

1. Make sure that the sensor is in Switch mode.
2. Access the TEACH mode.

| Action | Result |
|--|--|
| Single-pulse the remote input.  | "RMT TCH" and the current measurement value display. |

3. Present the target.

| Action | Result |
|---------------------|---|
| Present the target. | "RMT TCH" and the target's measurement value display. |

4. TEACH the sensor.

| Action | Result |
|---|---|
| Five-pulse the remote input.  | "TchSPt Teaching" displays while the sensor is being taught. <u>TEACH Accepted</u> The new value displays on the second line of the display, flashes, and the sensor returns to Run mode. <u>TEACH Not Accepted</u> "FAIL" flashes, the sensor returns to step 3, and "RMT TCH" displays. |

3.6.6 Adjust Switchpoint

The AdjSPt option manually adjusts the value of the setpoint threshold for the discrete output when the sensor is in Switch mode. The value is adjustable between 100.0 mm (3.94") and 400.0 mm (15.75"). This menu is not available when the sensor is in Window, Alarm, or Health mode.

Navigate: MENU > D_OUT > AdjSPt

Remote Input: Not available

Default: 100.0 mm (3.94")

3.6.7 Mode

The Mode option sets the output to the desired mode.

Navigate: MENU > D_OUT > Mode

Remote Input: Available

Default: Wnd  mode

The following table describes the sensor modes.

| Mode | Description |
|---|--|
| Alarm | Alarm Mode: The Discrete Output is Off while a target is detected by the sensor at any distance. When a loss of signal occurs, the Discrete Output is On. This mode has no associated thresholds. |
| Health | Health Mode: The Discrete Output is On while a target is detected by the sensor at any distance. When a loss of signal occurs, the Discrete Output is Off. This mode has no associated thresholds. |
| Spt  | Switch Mode: The Discrete Output is On while a target is detected nearer than the setpoint threshold. When a target is detected farther than the setpoint threshold or the signal is lost, the Discrete Output is Off. |
| Spt  | Switch Mode: The Discrete Output is Off while a target is detected nearer than the setpoint threshold. When a target is detected farther than the setpoint threshold or the signal is lost, the Discrete Output is On. |
| Wnd  | Window Mode: The Discrete Output is On while a target is detected between the SPt1 and SPt2 thresholds. (Default) When a target is detected outside the SPt1 and SPt2 thresholds or the signal is lost, the Discrete Output is Off. |
| Wnd  | Window Mode: The Discrete Output is Off while a target is detected between the SPt1 and SPt2 thresholds. When a target is detected outside the SPt1 and SPt2 thresholds or the signal is lost, the Discrete Output is On. |

Remote Input Instructions

1. Access the setup mode.

| Action | Result |
|--|--------------------------|
| Double-pulse the remote input.  | "REMOTE SETUP" displays. |

2. View the current mode.

| Action | Result |
|--|----------------------------|
| Double-pulse the remote input.  | The current mode displays. |

3. Program the sensor.

| Action | Result | | | | | | | | | | | | | | |
|--|---|---|------|---|-------|---|--------|---|---|--|---|---|---|---|---|
| Pulse the remote input 1 to 6 times to select the desired mode. | The selected mode flashes and the sensor returns to Run mode. | | | | | | | | | | | | | | |
| <table border="1"> <thead> <tr> <th>Pulses</th> <th>Mode</th> </tr> </thead> <tbody> <tr> <td>1 </td> <td>Alarm</td> </tr> <tr> <td>2 </td> <td>Health</td> </tr> <tr> <td>3 </td> <td>Swtch </td> </tr> <tr> <td>4 </td> <td>Swtch </td> </tr> <tr> <td>5 </td> <td>Wnd </td> </tr> <tr> <td>6 </td> <td>Wnd </td> </tr> </tbody> </table> | | Pulses | Mode | 1  | Alarm | 2  | Health | 3  | Swtch  | 4  | Swtch  | 5  | Wnd  | 6  | Wnd  |
| Pulses | | Mode | | | | | | | | | | | | | |
| 1  | | Alarm | | | | | | | | | | | | | |
| 2  | | Health | | | | | | | | | | | | | |
| 3  | | Swtch  | | | | | | | | | | | | | |
| 4  | | Swtch  | | | | | | | | | | | | | |
| 5  | Wnd  | | | | | | | | | | | | | | |
| 6  | Wnd  | | | | | | | | | | | | | | |

3.6.8 Timer

The Timer option sets the delays and timers. On/Off Delays and On/Off One-Shot timers can be programmed between 1 to 9999 ms (a value of 0 disables the delay/timer). [Figure 21](#) on page 28 defines how the delays/timers affect the output behavior.

Navigate: MENU > D_OUT > Timer

Remote Input: not available

Default: 0 ms for all timers

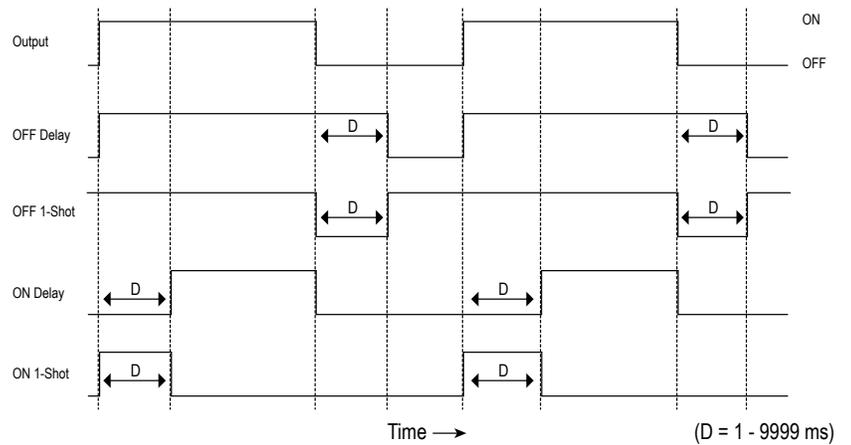

Figure 21. Delays/Timers

Some combinations of delays/timers are not allowed. The programming menu automatically disables invalid combinations of delays/timers. The following table shows the allowable combinations of delays/timers.

| | Off Delay | Off One-Shot Timer | On Delay | On One-Shot Timer |
|------------------------------|-----------|--------------------|----------|-------------------|
| Off Delay (OffDly) | OK | OK | OK | N/A |
| Off One-Shot Timer (Off1Sho) | OK | OK | N/A | N/A |
| On Delay (OnDly) | OK | N/A | OK | OK |
| On One-Shot Timer (On1Sho) | N/A | N/A | OK | OK |

3.6.9 Polarity

The Polarity option sets the discrete output polarity to either PNP (current sourcing) or NPN (current sinking). The physical wiring of the sensor and the sensor polarity setting must match.

Navigate: MENU > D_OUT > Polarity

Remote Input: Not available

Default: PNP

3.7 Input Menu (INPUT)

Use this menu to view or change the:

- Multi-function input type
- Active state of the remote input

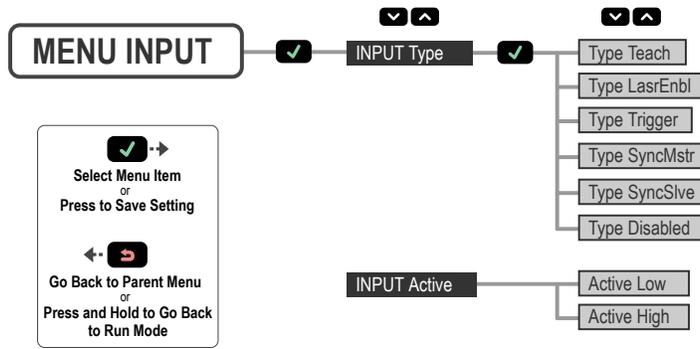

Figure 22. Input Menu Map

3.7.1 Input Type

The Type option sets the input type.

Navigate: MENU > INPUT > Type

Remote Input: Not available

Default: Teach

| Input Type | Description |
|------------|---|
| Teach | The remote input is used to TEACH and program the sensor. (Default) |
| LasrEnbl | The remote input is used to control when the laser emitter is On/Off. |
| Trigger | The remote input is used to trigger advanced measurements To enable advanced measurements, the Input Type option must be set to Trigger (see Trigger on page 30). |
| SyncMstr | The remote input is used as the Master Sync output to an attached Slave sensor (see Sync Master/Slave on page 35). |
| SyncSlve | The remote input is used as the Slave Sync input from an attached Master sensor (see Sync Master/Slave on page 35). |
| Disabled | The remote input is disabled. |

3.7.2 Input Active

The Active option sets the active state of the remote input. Use the Active options to change the active input to Low or High.

Navigate: MENU > INPUT > Active

Remote Input: Not available

Default: Low

| Input Active | Description |
|--------------|--|
| Low | The remote input detects low (0 V) inputs and high-to-low transitions. (Default) |
| High | The remote input detects high (V+) inputs and low-to-high transitions. |

3.8 Measure Menu (MEASURE)

Use this menu to view or change the:

- Speed
- Trigger

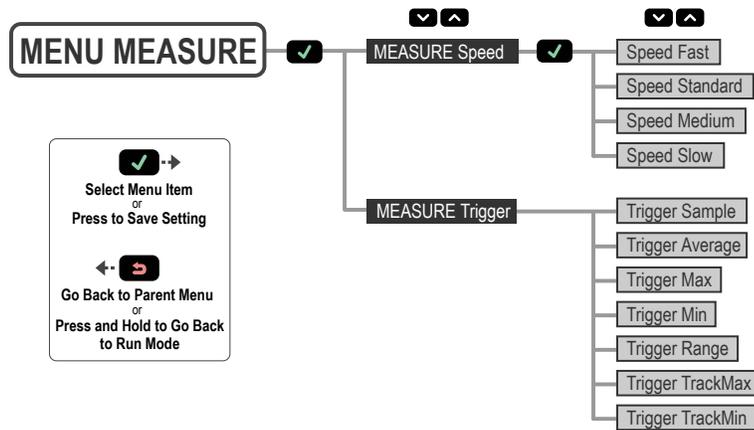

Figure 23. Measure Menu Map

3.8.1 Speed

The Speed option sets the speed at which the measurement is calculated. This process uses averaging in the digital processing of the signal to calculate the measurement. A slower speed increases the response time of the sensor but improves the repeatability. See [Figure 34](#) on page 39 for repeatability specifications for each speed.

Navigate: MENU > MEASURE > Speed

Remote Input: Not available

Default: Standard

| Speed | Response Time | Response Time in Sync Mode |
|----------|----------------|----------------------------|
| Fast | 2 ms | 4 ms |
| Standard | 5 ms (Default) | 10 ms |
| Medium | 15 ms | 30 ms |
| Slow | 50 ms | 100 ms |

3.8.2 Trigger

The Trigger option sets the advanced measurement that is calculated when a trigger event is detected on the remote input. The analog output updates with the new advanced measurement on each trigger event. To use these Trigger options, the sensor Input Type option must be set to Trigger; see [Input Type](#) on page 29.

Navigate: MENU > MEASURE > Trigger

Remote Input: Not available

Default: Sample

| Trigger | Description |
|---------------|--|
| Sample | The current distance at the time of the trigger event. (Default) The Analog Output tracks the sample values during the measuring period. |
| Average | The averaged distance since the last trigger event. |
| Maximum (Max) | The maximum distance since the last trigger event. |
| Minimum (Min) | The minimum distance since the last trigger event. |
| Range | The difference between the maximum and minimum distance since the last trigger event. For additional information on the Range measurement behavior when the maximum or minimum distance is outside of the taught setpoints, see Loss of Signal on page 18. |

| Trigger | Description |
|----------|---|
| TrackMax | The maximum distance since the last trigger event. The Analog Output tracks new maximum values during the measurement period. |
| TrackMin | The minimum distance since the last trigger event. The Analog Output tracks new minimum values during the measurement period. |

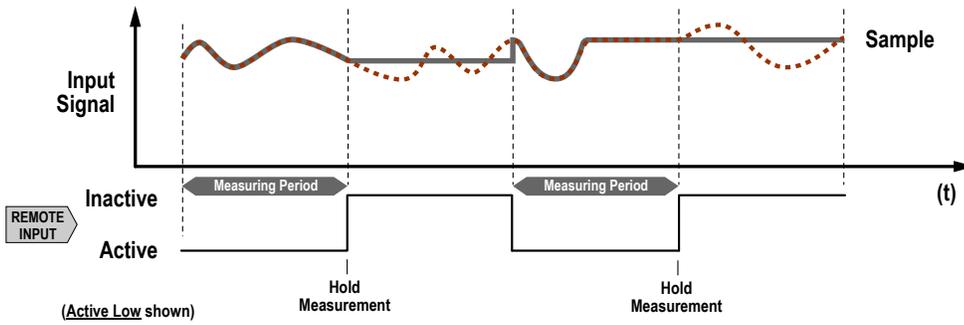

Figure 24. Sample

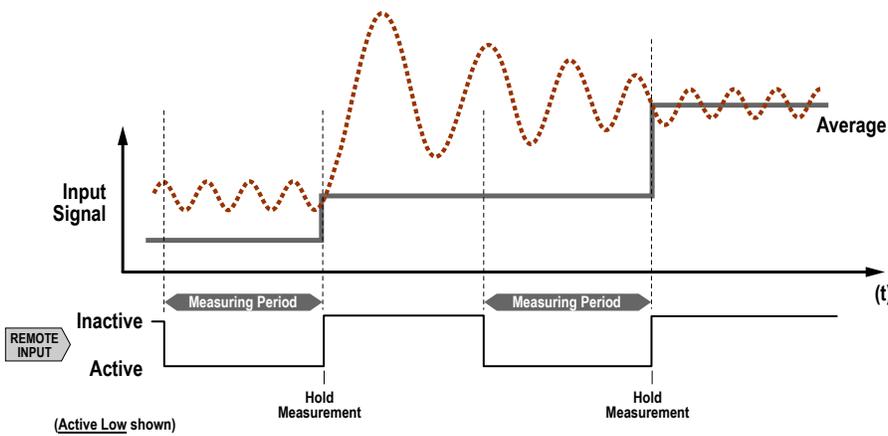

Figure 25. Average

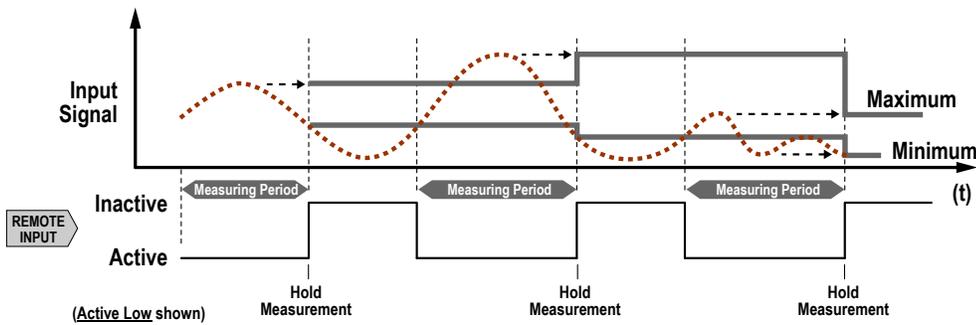

Figure 26. Maximum and Minimum

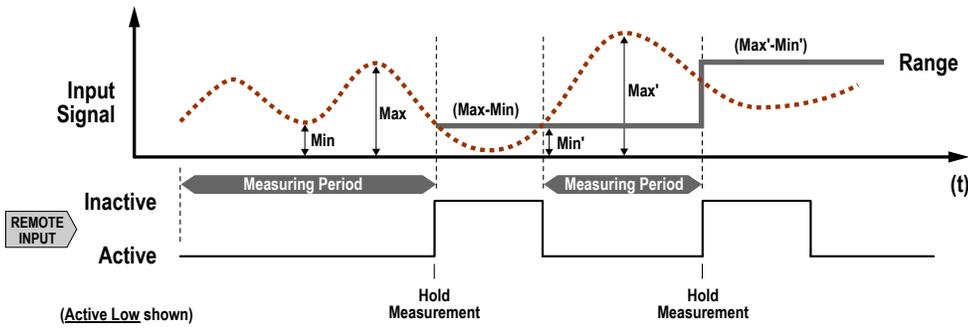

Figure 27. Range

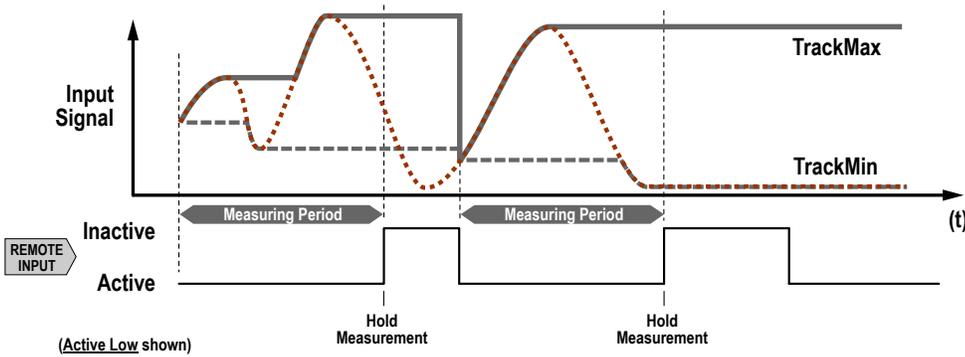

Figure 28. Track Maximum and Track Minimum

3.9 Display Menu (DISPLAY)

Use this menu to view or change the:

- Display units
- Display orientation
- Sleep mode settings

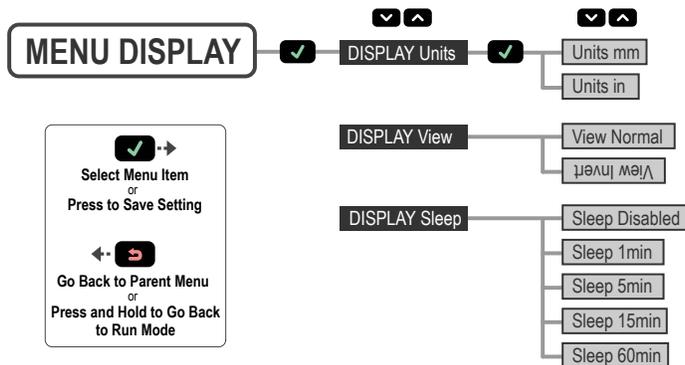

Figure 29. Display Menu Map

3.9.1 Units

The Units option sets the displayed units to millimeters (mm) or inches (in). The measurement range is 100.0 mm (3.94") to 400.0 mm (15.75").

Navigate: MENU > DISPLAY > Units

Remote Input: Not available

Default: mm

3.9.2 View

The View option sets the display orientation of the sensor. For applications where the sensor must be mounted so that the display is not right-reading, invert the display for readability. The Down and Up buttons do not change when the display is inverted.

Navigate: MENU > DISPLAY > View

Remote Input: Not available

Default: Normal

Figure 30. Normal Display Orientation

Figure 31. Inverted Display Orientation

3.9.3 Sleep

The Sleep option sets when the display is put to sleep. Four timing options are available: 1, 5, 15, or 60 minutes. Sleep mode is disabled by default. Sleep occurs in Run mode and any menu. To wake the sensor and return to the last viewed mode or menu, press any button.

Navigate: MENU > DISPLAY > Sleep

Remote Input: Not available

Default: Disabled

3.10 Information Menu (INFO)

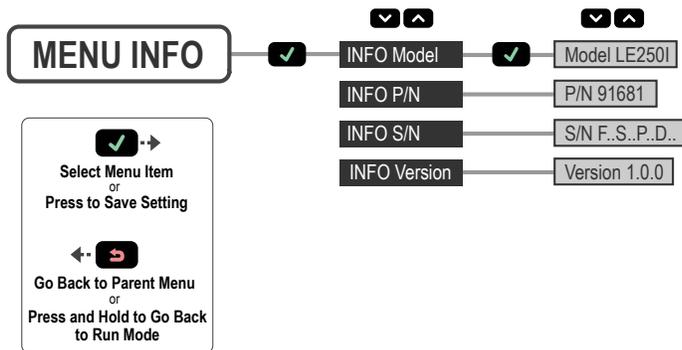

Figure 32. Information Menu Map

Use this menu to view model, part number (P/N), serial number (S/N), and firmware version (Version) information. Select one of these options to view specific information for your sensor. This information is read-only.

Navigate: MENU > INFO

Remote Input: Not available

3.11 Reset Menu (RESET)

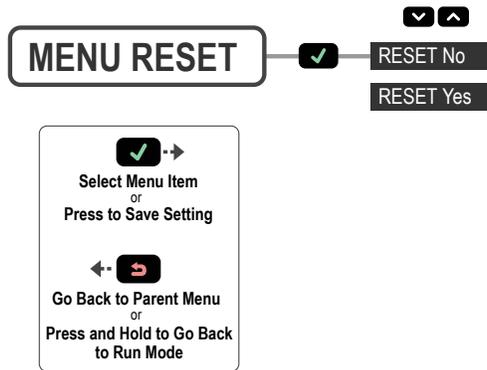

Figure 33. Reset Menu Map

Use this menu to restore the sensor to the factory default settings. See [Factory Default Settings](#) on page 34.

Navigate: MENU > RESET. Select Yes to apply the factory defaults; select No to return to the Reset option without changing any sensor settings.

Remote Input: Eight-pulse the remote input

3.11.1 Factory Default Settings

| Analog Output Settings | Factory Default |
|------------------------|-------------------|
| Adjust 4 mA (0 V) | 100.0 mm (3.94") |
| Adjust 20 mA (10 V) | 400.0 mm (15.75") |
| Loss of Signal | 3.5 mA (0 V) |
| Slope | Positive |
| Window Size | 50.0 mm (1.97") |

| Discrete Output Settings | Factory Default |

4 Sync Master/Slave

Two LE Lasers may be used together in a single sensing application. To eliminate crosstalk between the two sensors, configure one sensor to be the master and one to be the slave. In this mode, the sensors alternate taking measurements and the response speed doubles.

1. Configure the first sensor as the master; navigate: MENU > INPUT > Type > SyncMstr.
2. Configure the second sensor as the slave; navigate: MENU > INPUT > Type > SyncSlve.
3. Connect the gray (input) wires of the two sensors together.

5 Additional Remote TEACH Procedures

5.1 TEACH Analog Output and Discrete Output Setpoints Together

Use the following procedure to teach identical Analog Output and Discrete Output setpoints at the same time using the remote input. This feature is not available using the buttons.

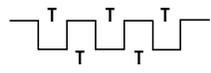

1. Access the TEACH mode.

| Action | | Result |
|--------------------------------|---|--|
| Single-pulse the remote input. |  | "RMT TCH" and the current measurement value display. |

2. Present the target.

| Action | | Result |
|----------------------------------|--|---|
| Present the setpoint one target. | | "RMT TCH" and the target's measurement value display. |

3. TEACH the sensor.

| Action | | Result |
|-------------------------------|---|---|
| Three-pulse the remote input. |  | <p>"TchA&D1 Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and then "TchA&D2" and the current measurement value display.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

4. Present the target.

| Action | | Result |
|----------------------------------|--|---|
| Present the setpoint two target. | | "TchA&D2" and the target's measurement value display. |

5. TEACH the sensor.

| Action | | Result |
|--------------------------------|---|---|
| Single-pulse the remote input. |  | <p>"TchA&D2 Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

5.2 TEACH Analog Output and Discrete Output Midpoints Together

Use the following procedure to teach an identical Analog Output 12 mA (5 V) point and Discrete Output midpoint (setpoint) at the same time using the remote input. This feature is not available using the buttons. Note that if the window sizes were set independently (using the buttons), the windows taught using the following procedure could be different.

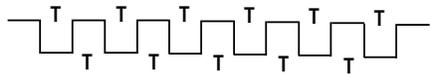

1. Access the TEACH mode.

| Action | | Result |
|--------------------------------|---|--|
| Single-pulse the remote input. |  | "RMT TCH" and the current measurement value display. |

2. Present the target.

| Action | | Result |
|---|--|---|
| Present the midpoint (setpoint) target. | | "RMT TCH" and the target's measurement value display. |

3. TEACH the sensor.

| Action | | Result |
|-----------------------------|--|--|
| Six-pulse the remote input. |  | <p>"TchA&D Teaching" displays while the sensor is being taught.</p> <p><u>TEACH Accepted</u></p> <p>The new value displays on the second line of the display, flashes, and the sensor returns to Run mode.</p> <p><u>TEACH Not Accepted</u></p> <p>"FAIL" flashes, the sensor returns to step 2, and "RMT TCH" displays.</p> |

6 Specifications

Sensing Beam

Visible red Class 2 laser, 650 nm

Supply Voltage (Vcc)

12 to 30 V dc

Power and Current Consumption, exclusive of load

Normal Run Mode: 1.7 W, Current consumption < 70 mA at 24 V dc

Sensing Range

100.0 mm (3.94") to 400.0 mm (15.75")

Output Configuration

Analog output: 4 to 20 mA or 0 to 10 V, depending on model
Discrete output rating: Discrete NPN/PNP is user-configurable

Output Ratings

Discrete Output: 100 mA maximum (protected against continuous overload and short circuit)
OFF-state leakage current—PNP: < 10 µA at 30 V
OFF-state leakage current—NPN: < 200 µA at 30 V
Output saturation voltage—PNP outputs: < 3 V at 100 mA
Output saturation voltage—NPN outputs: < 1.6 V at 100 mA
Analog current output (LE...I Models): 1 kΩ max. @ 24 V;
max. load resistance = $[V_{cc}-4.5/0.02 \Omega]$
Analog voltage output (LE...U Models): 2.5 kΩ min. load resistance

Remote Input

Allowable Input Voltage Range: 0 to Vcc
Active Low (internal weak pullup—sinking current):
· High State > 4.3 V at 740 µA max.
· Low State < 1.3 V at 800 µA max.
Active High (internal weak pulldown—sourcing current):
· High State > 4.3 V at 1.7 mA max.
· Low State < 1.3 V at 1.6 mA max.

Supply Protection Circuitry

Protected against reverse polarity and transient over-voltages

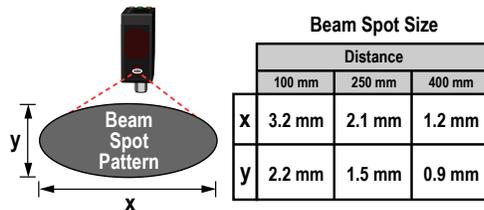

Analog Resolution

100 mm to 250 mm: Less than 0.02 mm
250 mm to 400 mm: Less than 0.2 mm

Measurement/Output Rate

< 1 ms

Typical Beam Spot Size

Beam spot size is calculated as 1.6 times the D4σ measured value

Response Time

Fast: 2 ms ¹
Standard: 5 ms
Medium: 15 ms
Slow: 50 ms

Delay at Power Up

2 s

Ambient Light Immunity

> 10,000 lux

Minimum Window Size, Analog and Discrete

1.0 mm (0.039")

Boresighting

4 mm radius at 400 mm

Maximum Torque

2 N·m (17.7 in-lbs)

Repeatability

See *Performance Curves*

Temperature Effect

Indicators

Power LED Indicator
Solid Green = Normal operation, power On and laser On
Flashing Green (1 Hz) = Power On and laser Off (laser enable mode)
Analog Output LED Indicator
Solid Amber = Displayed distance is within the taught analog output window
Off = Displayed distance is outside the taught analog output window
Discrete Output LED Indicator
Solid Amber = Discrete Output is On
Off = Discrete Output is Off

Construction

Housing: die-cast zinc
Window: acrylic

Vibration/Mechanical Shock

All models meet Mil. Std. 202 G requirements method 201A.
Also meets IEC 60947-5-2.

Environmental Rating

IP67, NEMA 6

Operating Conditions

Temperature: -20 °C to +55 °C (-4 °F to +131°F)
Humidity: 90% at +55 °C maximum relative humidity (non-condensing)

Storage Temperature

-30 °C to +65 °C (-22 °F to +149 °F)

Application Note

For optimum performance, allow 10 minutes for the sensor to warm up

Certifications

Ind. Cont. Eq.
3TJJ

¹ Response time for lateral entry of object into measurement range < 5 ms

6.2 Dimensions

All measurements are listed in millimeters (inches), unless noted otherwise.

7 Troubleshooting

| Message/Indicator | Description | Resolution |
|------------------------------|---|--|
| Fail/ Min Wnd OutRnge | The minimum window size is 1.0 mm (0.039"). One point of the adjusted or taught window is out of range. | The sensor automatically returns to the previous setting. |
| Fail/ Out of Range | The TEACH failed, the target is out of range. The target might have moved out of range after the TEACH process began. | TEACH the setpoint within the measurement range. |
| Fail/ Wnd out of Range | The window TEACH failed. <ul style="list-style-type: none"> The window is out of the measurement range. The target might have moved out of range after the TEACH process began. The window is too large. | TEACH the window within the measurement range. |
| MIN Wnd 1.0 mm (0.039") | The adjusted or taught window size is too small; the minimum window size is 1.0 mm (0.039"). | The sensor automatically adjusts the window size to maintain the minimum window size of 1.0 mm (0.039") and completes the adjust or TEACH operation. |
| OutRnge | The target is out of range, too dark, or the sensor is not measuring. | Move the target within the measurement range. |
| Power LED is flashing green | The sensor input is set to laser enable and the input is not active. | See Input Type on page 29. |
| Power LED is flashing red | The laser shut off, the Power LED flashes red and Output LEDs flash amber at 1Hz, and the display is blank. The laser has experienced a fault. | Contact Banner Engineering to resolve. |
| Type Sync Slave | The slave mode sensor does not see the master's pulse. | Make sure that the master mode sensor is configured and functioning properly. Check the input wire connection between the master and slave. |

9 Accessories

9.1 Cordsets

All measurements are listed in millimeters, unless noted otherwise.

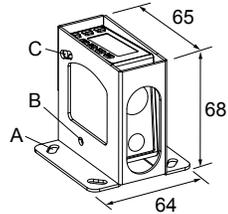

| 5-Pin Threaded M12/Euro-Style Cordsets with Shield | | | | |
|--|----------------|-------------|------------|--|
| Model | Length | Style | Dimensions | Pinout (Female) |
| MQDEC2-506 | 1.83 m (6 ft) | Straight | | <p>1 = Brown 2 = White 3 = Blue 4 = Black 5 = Gray</p> |
| MQDEC2-515 | 4.57 m (15 ft) | | | |
| MQDEC2-530 | 9.14 m (30 ft) | | | |
| MQDEC2-550 | 15.2 m (50 ft) | | | |
| MQDEC2-506RA | 1.83 m (6 ft) | Right-Angle | | |
| MQDEC2-515RA | 4.57 m (15 ft) | | | |
| MQDEC2-530RA | 9.14 m (30 ft) | | | |
| MQDEC2-550RA | 15.2 m (50 ft) | | | |

9.2 Brackets

All measurements are listed in millimeters, unless noted otherwise.

SMBLEU

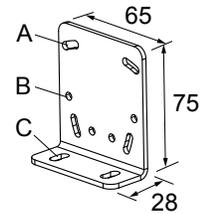

- Enclosed bracket
- 12 gauge stainless steel

Hole size: A = \varnothing 5 with 20° adjustability, B = \varnothing 4.5, C = \varnothing 4.5 with 10° adjustability

SMBLEL

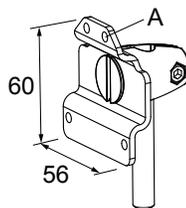

- Right-angle bracket
- 12 gauge stainless steel

Hole size: A = \varnothing 4.5 with 20° adjustability, B = \varnothing 4.5, C = \varnothing 5.7 with 20° adjustability

SMBLEFA

- Swivel plate bracket
- 12 gauge stainless steel

Hole size: A = 4x \varnothing 4.5

10 Banner Engineering Corp Limited Warranty

Banner Engineering Corp. warrants its products to be free from defects in material and workmanship for one year following the date of shipment. Banner Engineering Corp. will repair or replace, free of charge, any product of its manufacture which, at the time it is returned to the factory, is found to have been defective during the warranty period. This warranty does not cover damage or liability for misuse, abuse, or the improper application or installation of the Banner product.

THIS LIMITED WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES WHETHER EXPRESS OR IMPLIED (INCLUDING, WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE), AND WHETHER ARISING UNDER COURSE OF PERFORMANCE, COURSE OF DEALING OR TRADE USAGE.

This Warranty is exclusive and limited to repair or, at the discretion of Banner Engineering Corp., replacement. IN NO EVENT SHALL BANNER ENGINEERING CORP. BE LIABLE TO BUYER OR ANY OTHER PERSON OR ENTITY FOR ANY EXTRA COSTS, EXPENSES, LOSSES, LOSS OF PROFITS, OR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM ANY PRODUCT DEFECT OR FROM THE USE OR INABILITY TO USE THE PRODUCT, WHETHER ARISING IN CONTRACT OR WARRANTY, STATUTE, TORT, STRICT LIABILITY, NEGLIGENCE, OR OTHERWISE.

Banner Engineering Corp. reserves the right to change, modify or improve the design of the product without assuming any obligations or liabilities relating to any product previously manufactured by Banner Engineering Corp.
