MODEL PSMA POWER SUPPLY & INTERFACE MODULE

PROVIDES POWER FOR SENSORS & ACCESSORIES WITH SIGNAL
 CONDITIONING FOR INPUT TO CUB COUNTERS* & DITAK TACHOMETERS*

ALLOWS CUB COUNTERS & DITAK TACHOMETERS TO OPERATE WITH:

- 2-WIRE PROXIMITY SENSORS,
- ROTARY PULSE GENERATORS,
- LOGIC MAGNETIC PICKUPS,
- MEASURING WHEEL LENGTH SENSORS,
- CLOCK OSCILLATOR MODULES,
- AND MANY OTHER SENSORS, CIRCUITS AND ACCESSORIES

* PSMA intended for use with CUB 1, 2, and 7 Counters and Ditak 8 and 9 Tachometers.

DESCRIPTION

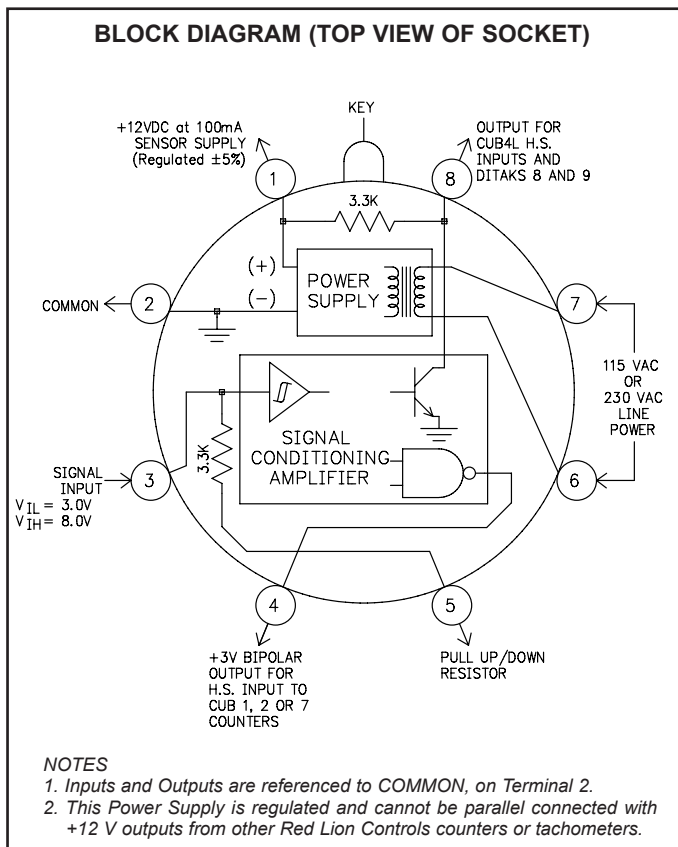

Cub Counters and Ditak Tachometers are basically self-powered devices and do not have built-in capability for powering electronic sensors or accepting high level sensor outputs. The PSMA provides a convenient plug-in answer to those applications requiring electronic sensors or accessories for pulse input to Cub Counters or Ditak Tachometers.

The PSMA is available in 115 VAC and 230 VAC primary power input versions, and delivers regulated D.C. voltage for sensors and accessories. The signal conditioning amplifier can accept NPN or PNP Open Collector Inputs, or 2-Wire Proximity Sensor Inputs.

The signal conditioning amplifier supplies two separate outputs, one for direct drive to the H.S. Input of Cub Counters, and the other for direct drive input to the PSM Input of the Ditak. A "pulse stretcher" is used in the circuit that provides the output drive to Cub Counters (Terminal 4). This stretcher allows the PSM to accept 50 µsec input pulses, standard on some Red Lion Controls' sensors and accessories, and expand it to the 100 µsec pulse, as required by the Cub Counters. The Ditak output (Terminal 8) is not pulse stretched, allowing this output to continue functioning to the full 10 KHz limit of the Ditak.

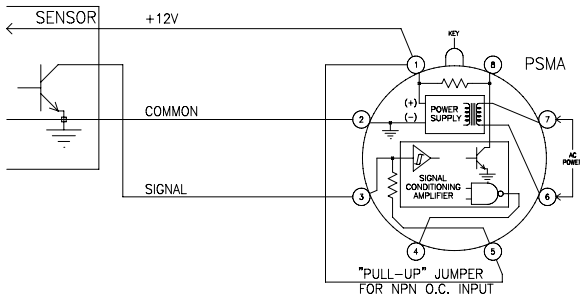

SPECIFICATIONS

1. **POWER SOURCE:** 2 versions, for 115 VAC ±10% 50/60 Hz, or 230 VAC ±10% 50/60 Hz. (See Ordering Information.)
2. **POWER OUTPUT TO SENSORS OR ACCESSORIES:** 12 VDC regulated ±5%, 100 mA max.
3. **INPUT SIGNAL:** (Terminal 3) NPN Open Collector (sink), PNP Open Collector (source), or 2-wire Input. Built-in 3.3 K resistor (Terminal 5) can be jumper connected for pull-up, pull-down, or left unconnected as required. Input Schmidt trigger levels as shown on BLOCK DIAGRAM.
4. **OUTPUTS:** (Terminal 4) Bi-polar drive to H.S. Input of Cub Counters supplies 100 µsec negative going logic pulse (switches from +3 to 0 volts) in response to a trailing (negative going) edge of the input pulse. This output will drive up to 3 Cub Counters in parallel. (Terminal 8) NPN Loaded Collector to drive the input of Ditaks. The output voltage on this terminal is in phase with the input signal going into Terminal 3. The high level of this voltage will be clamped to 6.2V by the zener diode in the Ditak. This output can drive up to 3 Ditak units.
5. **OPERATING FREQUENCY:**
 - 0 to 5 KHz with Cub Counters;
 - 0 to 10 KHz with Ditaks.
