

Safety Bus System

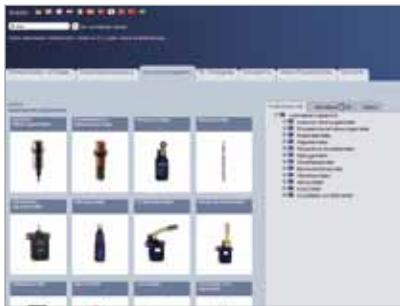

AS-Interface Safety at Work | Version 09

SCHMERSAL
Safe solutions for your industry

You will also find detailed information regarding our product variety on our website:

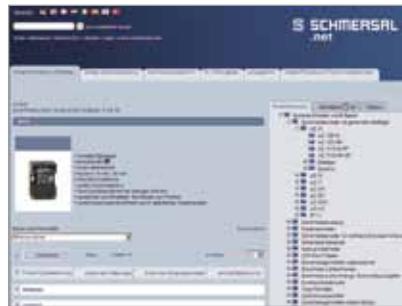

www.schmersal.net

Online documentation in 13 languages

The online catalogue for our customers is permanently updated. The Main catalogue can be consulted on the Internet in as much as 13 languages.

The technical data of our entire product range are available 24/7, always upto-date. The declarations of conformity, the test certificates and the mounting instructions can be consulted or even downloaded as well.

Service for designers

The online catalogue also includes the technical drawings of our products – a special service to designers. In this way, they can be downloaded and directly fed in CAD-systems.

The Schmersal homepage furthermore contains up-to-date information on general subjects, technical articles on machine safety as well as news regarding events and trainings. To be bookmarked!

The direct way

If you need further information or you want personal advice, you can call us as well: **Tel. +49-(0) 2 02-64 74-0.**

The addresses of our representations in Germany and abroad can be found on the front pages of this catalogue.

We are at your disposal – anyplace, anywhere, anytime!

Warning!

The Schmersal programme is not intended for private consumers, i.e. that they are not consumer products within the meaning of the European Directives (in Germany within the meaning of § 5 GPSG) or other national laws.

Subject to technical modifications and errors.

The data specified in this catalogue are carefully checked typical standard values.

Descriptions of technical correlations, details on external control units, installation and operating instructions or similar have been provided to the best of our knowledge. This however does not mean that any warranted characteristics or other

properties under liability law may be assumed, which extend beyond the "General Terms and Conditions of Delivery of Products and Services of the Electrical Industry".

We trust you will understand that the user must check our information and recommendations before using our equipment.

Easy, safe and reliable

AS-Interface Safety at Work®

AS-Interface Safety at Work (SaW) is the first safety bus system based upon the open standard of AS-International. Safety components such as Emergency Stop command devices, safety switches, solenoid interlocks or safety light curtains are simply connected to the yellow AS-Interface cable. For the evaluation of the safety signals a „Safety Monitor“ is merely added to the AS-Interface system.

AS-Interface Standard in accordance with EN 50295

With the integration of AS-Interface SaW the AS-Interface network will continue to operate unchanged. The well known components, like the standard AS-Interface master, the standard power supply as well as the AS-Interface yellow cable will still form the basis of all AS-Interface installations. Therefore an existing machine can easily be equipped with additional AS-i SaW components.

The heart of safety

The safety monitor analyses all transmitted information from each safety device on the AS-Interface network and, in case of a safety device being activated or in case of a fault in one of the safety devices, the safety monitor immediately shuts down to create a safe condition. The safety monitor is equipped with one or two redundant pairs of enabling paths for applications up to performance level e according to EN ISO 13849-1. Each safety function of the monitor can be set with a simple drag & drop software. Afterwards the configuration is downloaded into the safety monitor and protected with a password.

Safe transmission mechanism

The communication protocol for safety relevant applications is based on the unchanged AS-Interface Standard transmission. With each AS-Interface master call each safety device answers in return with a preset data telegram. This information is analysed and in case of a deviation from the pre-set values the enabling paths are opened. The maximum response time for a safe shutdown is 40 ms.

Cost reduction with AS-Interface Safety at Work

Reduce cost and installation time – A never ending story. During installation and machine commissioning as well as during maintenance, AS-Interface SaW supports the user with integrated system diagnosis. It provides detailed information about the cause and place of the failure, and enables the user to quickly find and analyse a malfunction and therefore minimise machine downtime. With AS-Interface Safety at Work you can directly reduce your cost.

More flexibility with AS-Interface Safety at Work

For the realisation of individual safety solutions, SCHMERSAL offers the maximum amount of flexibility with its diverse range of safety devices. Depending on the application the user can choose the optimal solution out of an extensive product basket. As AS-Interface SaW is an open system, the user has also the possibility to include additional Safety components from other suppliers. AS-Interface Safety at Work fulfils the safety requirements to the highest standards.

Less installation time with AS-Interface Safety at Work

Easier and quicker with AS-Interface SaW: Choose a Safety device – Connect it to the yellow AS-Interface cable – Configure the safety function in the safety monitor. – That's it.

No further settings are required at each of the safety devices, the bulky parallel wire cables between the safety devices in the field and the switching cabinet are reduced and wiring time is decreased. The power supply for all safety sensors is supplied over the single yellow AS-Interface cable.

Safety monitors

Safety switches

Solenoid interlocks

Non-contact solenoid interlock

Position switches with safety function

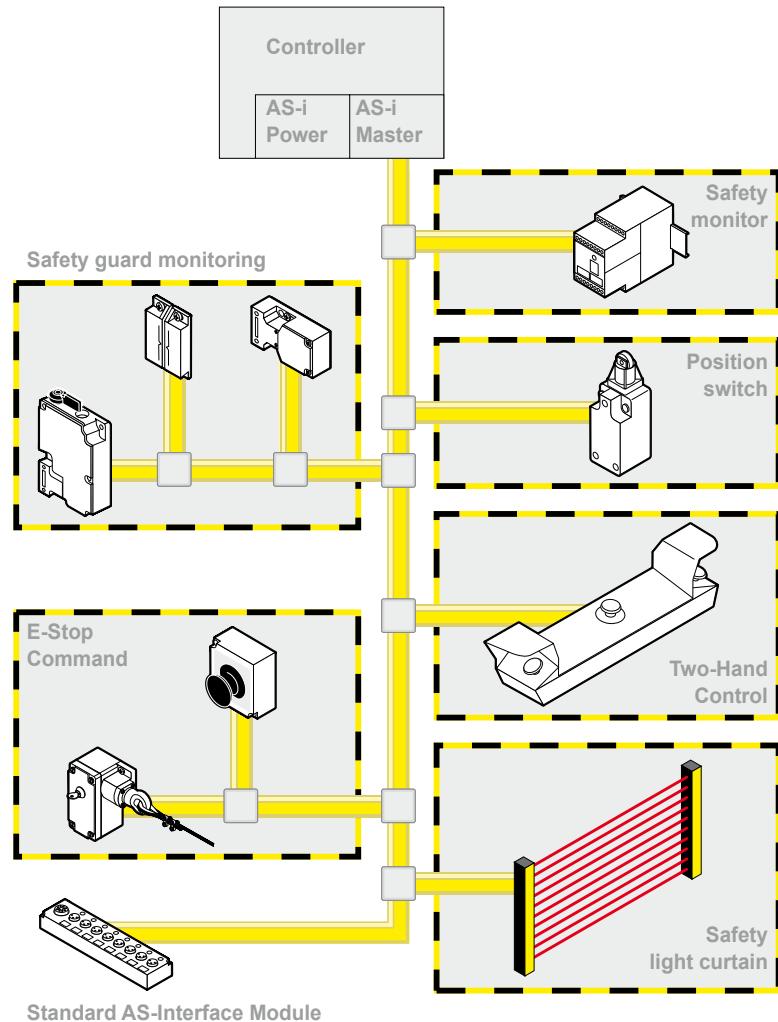

Pull-wire emergency stop switches

AS-Interface SaW - System Features

- Up to 31 standard and safety slaves on the AS-Interface system
- No Safety PLC necessary
- Safety-relevant signals can be allocated into groups and multiple Safety monitors may be connected
- Response time is max. 40 ms
- Safety-relevant signals can be integrated into plant diagnostics
- Certified up to
 - PL e/category 4 in accordance with EN ISO 13849-1
 - SIL 3 in accordance with IEC 61508
- Certified by the TÜV (German Technical Inspectorate)

ASM

Safety monitor for 1 AS-i circuit

- Monitoring of up to 31 safe AS-i slaves, e.g.: safety switches, solenoid interlocks, emergency stop devices, two-hand controls, light curtains and light grids, etc.
- Control of up to 2 redundant enabling paths
- Configurable monitoring modules for the different safety switchgear
- Filter functions for bouncing safety guards
- Other functions:
AND operations, OR operations, start modules, on-site reset, start-up test, stop categories 0 and 1
- Edge-sensitive start push button
- Feedback circuit to monitor external contactors
- LED status display
- Signal outputs (transistor, short-circuit proof)
- AS-i system connection

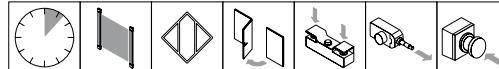

- These device types are **not suitable** for the:
 - control of safe AS-i outputs
 - connection of 2 AS-i circuits

- Suitable for applications:
 - up to PL e / category 4 to EN ISO 13849-1
 - up to SIL 3 to IEC/EN 61508
 - PFH value: $9.1 \times 10^{-9}/\text{h}$

Technical data

Standards:	EN 50295, EN ISO 13849-1, IEC 61508, EN 60947-5-1, IEC/EN 60204-1, EN 61496-1
Enclosure:	Polyamide PA 66, black
Mounting:	Snaps onto standard DIN rail to EN 50022
Screw terminals:	max. 2.5 mm ² (incl. conductor ferrules)
Protection class:	Terminals IP20; enclosure IP20
U_b :	24 VDC ± 15 %
Residual ripple:	< 15%
I_b :	ASM E1-R2: 0.15 A; ASM E2-R2/R2: 0.2 A
Switch-on peak current:	600 mA
AS-Interface operating voltage:	18.5 ... 31.6 V
AS-Interface operating current:	< 45 mA
AS-Interface specification:	Profile - Monitor 7.F
Configuration interface:	RS 232 : 9600 baud, no parity, 1 start bit, 1 stop bit, 8 data bits
Inputs:	1.Y1, 1.Y2
Input signal:	„Y1, Y2“: $I_e < 10$ mA, 24 VDC (opto coupler, high-active)
Outputs:	ASM E1/R2: 1.13/14, 1.23/24, 1 enabling path (redundant); ASM E2-R2/R2: 1.13/14, 1.23/24, 2.13/14, 2.23/24, 2 enabling paths (redundant)
Utilisation category:	AC-15, DC-13
I_{th} :	3 A / 230 VAC; 1 A / 24 VDC
Switching voltage:	max. 230 VAC
I_{th} :	ASM E1-R2: 3 A per output circuit ASM E2-R2/R2: 2 A per output circuit
Max. fuse rating:	max. 4 A (slow blow), external
Additional outputs:	transistor outputs, 200 mA total, short-circuit proof-type, positive-switching
Switch-on time:	< 10 s
Response time:	< 40 ms
Indications:	AS-Interface: voltage LED green, communication LED red; Enabling paths: LED green/yellow/red
EMC:	to EN 61000-6-4, EN 61000-6-2
EMC rating:	to EMC Directive
Oversupply category:	III to DIN VDE 0110
Resistance to vibration:	0 ... 55 Hz, amplitude 0.35 mm
Resistance to shock:	10 g / 16 ms
Ambient temperature:	-20 °C ... +60 °C
Storage and transport temperature:	-30 °C ... +70 °C
Weight:	ASM E1-R2: approx. 350 g; ASM E2-R2/R2: approx. 450 g
Dimensions:	45 x 105 x 120 mm
Classification:	
Standards:	EN ISO 13849-1; IEC 61508
PL:	up to e
Category:	up to 4
PFH value:	$9.1 \times 10^{-9}/\text{h}$
SIL:	up to 3
Mission time:	20 years

Approvals

Ordering details

ASM ①

No.	Option	Description
①	E1-R2	1 enabling path (redundant)
	E2-R2/R2	2 enabling paths (redundant)

Note

The safety monitors ASM E1-R2 and ASM E2-R2/R2 evaluate all transmitted information from each safety device on the AS-Interface network. For the safe guarding of different applications various AS-Interface Safety at Work compatible safety devices are needed, i.e. safety switches, solenoid interlocks, safety sensors, E-stop buttons as well as safe input modules.

Note

- The installation of different safety areas is possible with numerous safety monitors working alongside each other. The maximum number of safety devices including the safety monitors may not exceed 31 participants.
- The allocation of the safety devices to one or more safety monitors is achieved with the help of the configuration software "asimon".
- The wiring diagram shows the safety monitor ASM E2-R2/R2 with start-pushbuttons and feedback loops.
- No safety devices are displayed, because they are installed in the field i.e. on the safety guards itself. The data connection between the safety monitor and the decentralised safety slaves is established via the ASInterface network.
- For the operation of AS-Interface Safety at Work system, a standard controller, an AS-Interface Master and AS-Interface power supply, must be used in the application.
- With the RJ 45 connector the safety monitor is configured and started up.

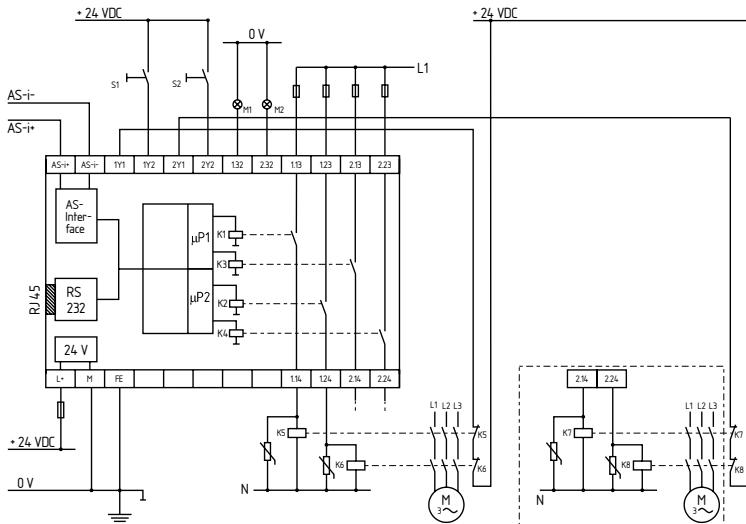

Start push button

A start push button (NO) can optionally be connected to the ASM. With the guard door(s) closed, the enabling paths are then not closed until the start push button has been operated. If neither start button nor feedback circuit are required, then no connections are required to the terminals (1Y1/2, 2Y1/2).

Output expander module

For additional contacts by means of more enabling paths and potential-free indication contacts an output expander module is connected to the safety monitor, i.e. to the internal ASM enabling path. For the control of the additional outputs the ASM feedback loop is utilised.

Wiring diagram

Note

Further information and details of the safety monitor ASM are available on the asimon-CD-ROM.

Note

The AS-i system limitations according to EN 50295 have to be considered during the planning, development and design phase of the AS-i network, especially the max. number of AS-i slaves and the total „yellow“ cable length (< 100 m without repeater).

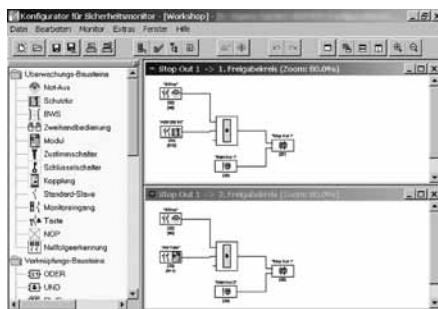

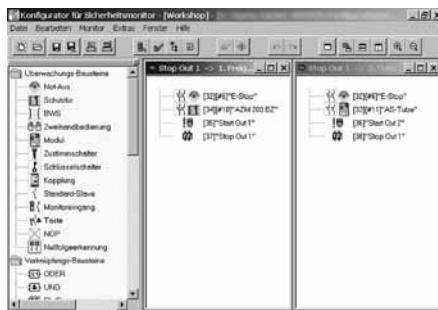

For the control of safety outputs and for coupling multiple AS-i networks, other safety monitoring modules like ASM G2 must be used.

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

AS-Interface Safety at Work

asimon version 3.x

The asimon software is a tool for the configuration and commissioning of the AS-Interface safety monitor.

The configuration of the safety monitor and its safety devices, i.e. E-Stop buttons, solenoid interlocks, safety switches, 2-Hand controls, light curtains etc. is performed by an easy-to-use graphical interface. Thus providing safeguarding of hazardous areas present by power-driven machinery.

The asimon offers the user a library of icons representing different safety devices and other functional devices. For the implementation of a new safety application the required safety devices are selected from the icon library, configured and assigned to the respective enabling path.

Following the successful configuration and download, the safety monitor and the safety devices can be tested and monitored with asimon.

Besides the classic representation in table form, a representation as logical diagram (FUP) can be chosen as well.

The following functions are available with the asimon software:

- Configuration of different safety devices
- Configuration of different filter functions for bouncing safety guards
- Configuration of start-modules
- Configuration logical combinations (AND, OR, RS Flip-Flops)
- Configuration of the feedback loops
- Configuration of the operating methods
- Configuration of the system-modules
- Print out of Configuration protocol

Asimon can be used offline as well as online during development and project planning. The configuration files can be saved and loaded as desired.

The software is compatible with the Microsoft® operating system Windows 95/98/ME/NT/2000/XP/Vista/7®.

Interface cable with one RJ 45 and SUBD 9 connector, Length: 1.2 m

ASM G2

• Safety monitor for 2 AS-i circuits

- Monitoring of up to 62 safe AS-i slaves, e.g.: safety switches, solenoid interlocks, emergency stop devices, two-hand controls, light curtains and light grids, etc.
- 256 function blocks (devices) possible
- Control of up to 16 redundant enabling paths, 2 internally in the device and up to 14 external safe AS-i outputs
- Mains coupling of 2 AS-i circuits
- LCD diagnostic display with 4 buttons
- Configurable monitoring modules for different safety switchgear
- Filter functions for bouncing safety guards
- Integrated muting module
- Other functions:
AND-operations, OR-operations, start modules, on-site reset, start-up test, stop categories 0 & 1
- START inputs: start functions through external button
- EDM inputs: connection of feedback circuits to monitor external contactors
- LED status indication
- AS-i system connection

• Suitable for applications:

- up to PL e / category 4 to EN ISO 13849-1
- up to SIL 3 to IEC/EN 61508
- PFH value: $5.4 \times 10^{-9}/\text{h}$

The addressing must take place via the M12 connector.

Misalignment

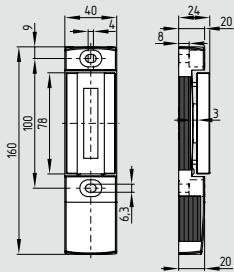

Actuator MZM 100-B1.1

System components

Mounting kit MS MZM 100-W

- Actuator free from play, i.e. neutralisation of undesired noises
- Sensor technology permits an offset between actuator and interlock of ± 5 mm vertically and ± 3 mm horizontally

Approvals

Approvals only in combination with switches MZM 100 AS

The addressing must take place via the M12 connector.	

Diagnosis

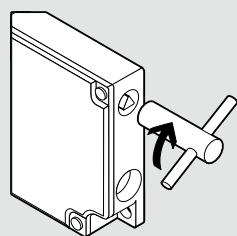

Diagnostic function:

Locking/unlocking of the solenoid interlock blocked:

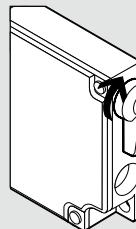

This error is detected, when the solenoid interlock can no longer be correctly locked or unlocked, for instance due to an incorrectly closed safety guard, a tilted actuator or an incorrect reset manual release.

The error is transmitted as "peripheral error" to the control system through the AS-i Master and indicated by the alternate flashing of the red/green AS-i duo-LED on the device.

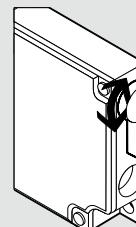

System components

Manual release

Emergency release

Emergency exit

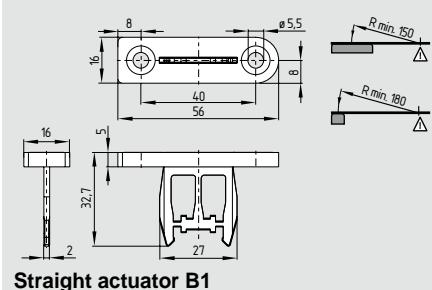

Note

Interlocks with power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

W..0

- Selector switch / Spring-return selector switch
- Version with standard knob, anthracite grey
- Ordering suffix, refer to table below

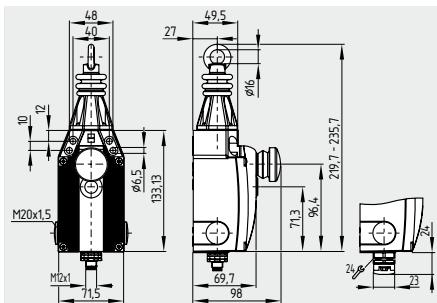

SW.20

- Key-operated selector switch / Spring-return selector switch
- Version with high-grade cylinder lock, therefore IP65 as well
- Ordering suffix, refer to table below

Ordering suffix	Selector switch	Selector switch	Spring-return	Spring-return	Selector switch
1 latching position					
	2 latching positions left and right of the zero position	1 touch position and automatic return to the zero position	2 touch positions left and right of the zero position and automatic return to the zero position	1 touch position right and automatic return to the zero position + 1 latching position left of the zero position	
	1 NO contact for each switching position	1 NO contact	1 NO contact for each switching position	1 NO contact for each switching position	
Standard knob	WS20	WS30	WT20	WT30	WTS30
Key-operated switch	SWS20		SWT20		

ZQ 900 AS

- **Pull-wire Emergency-Stop switches** to EN ISO 13850 / IEC 60947-5-5
- Metal enclosure
- Wire up to 50 m long
- Position indicator
- One tension force for wire lengths from 5 to 50 m
- Reset pushbutton
- Twisting of connection ring not possible
- External watertight collar
- Wire pull and breakage function
- Stainless
- Integrated AS-I interface
- AS-Interface M12 connector (turnable) or flat cable connection (turnable)
- Suitable for AS-i Power24
- Protection class IP67

Technical data

Standards:	EN ISO 13850, EN 50295, IEC 61508, EN ISO 13849-1, EN 60947-5-1	
Material of the housings:	zinc die-cast, enamel finish	
Material of the cover:	plastic, glass-fibre reinforced thermoplastic, self-extinguishing	
Switching principle:	snap action, NC contacts with positive break ⊖	
Response time:	< 100 ms	
Mechanical data		
Execution of the electrical connection:	connector M12, 5-pole, or flat cable connection	
Mechanical life:	> 100,000 operations	
Switching frequency:	max. 1/s	
Actuating force:	max. 200 N	
Actuating travel:	max. 400 mm	
Resistance to shock:	15 g / 11 ms	
Resistance to vibration:	10 ... 150 Hz, amplitude 0.35 mm / 5 g	
Length of wire:	max. 50 m	
Ambient conditions		
Ambient temperature:	-25 °C ... +60 °C	
Storage and transport temperature:	-25 °C ... +85 °C	
Relative humidity:	30 % ... 95 %

For many years the privately owned Schmersal Group has been developing and manufacturing products to enhance occupational safety. What started out with the development and manufacture of a

very wide variety of mechanical and non-contact switchgear has now become the world's largest range of safety systems and solutions for the protection of man and machine. Over 1,200 employees in more than 20 countries around the world are developing safety technology solutions in close cooperation with our customers, thus contributing to a safer world.

Motivated by the vision of a safe working environment, the Schmersal Group's engineers are constantly working on the development of new devices and systems for every imaginable application and requirement of the different industries. New safety concepts require new solutions and it is necessary to integrate new detection principles and to discover new paths for the transmission and evaluation of the information provided by these principles. Furthermore, the set of ever more complex standards, regulations and directives relating to machinery safety also requires a change in thinking from the manufacturers and users of machines.

These are the challenges which the Schmersal Group, in partnership with machinery manufacturers, is tackling and will continue to tackle in the future.

Product ranges	Industries	Services	Competences
 Safe switching and monitoring <ul style="list-style-type: none">■ Guard door monitoring safety switches■ Command devices with safety function■ Tactile safety devices■ Optoelectronic safety devices Safe signal processing <ul style="list-style-type: none">■ Safety monitoring modules■ Safety controllers■ Safety bus systems Automation <ul style="list-style-type: none">■ Position detection■ Command and signalling devices	 <ul style="list-style-type: none">■ Elevators and escalators■ Packaging■ Food■ Medicine/ pharmaceuticals■ Machine tools■ Wood working■ Construction machines and cranes■ Renewable energy sources■ Automotive■ Chemical industry	 <ul style="list-style-type: none">■ Application advice■ CE conformity assessment■ Risk assessment in accordance with the Machinery Directive■ Stop time measurements■ Training courses	 <ul style="list-style-type: none">■ Machine safety■ Automation■ Explosion protection■ Hygienic design

All data mentioned in this flyer have been carefully checked. Technical modifications and errors excepted.
